Prepared by the  
OCEAN DRILLING PROGRAM  
Texas A&M University  
in cooperation with the  
NATIONAL SCIENCE FOUNDATION  
and  
JOINT OCEANOGRAPHIC INSTITUTIONS, INC.

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Department of Energy, Mines and Resources (Canada)

Deutsche Forschungsgemeinschaft (Federal Republic of Germany)

Institut Français de Recherche pour l'Exploitation de la Mer (France)

National Science Foundation (United States)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

It is recommended that reference to the whole or to part of this volume be made in one of the following forms, as appropriate:

Austin, J. A., Jr., Schlager, W., et al., 1988. *Proc. ODP, Sci. Results*, 101: College Station, TX (Ocean Drilling Program).

Masure, E., 1988. Albian-Cenomanian dinoflagellate cysts from Sites 627 and 635, Leg 101, Bahamas. In Austin, J. A., Jr., and Schlager, W., et al., *Proc. ODP, Sci. Results*, 101: College Station, TX (Ocean Drilling Program), \_\_\_ - \_\_\_.

#### Effective Publication Dates of ODP *Proceedings*

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 105 (*Initial Reports*): August 1987

Volume 107 (*Initial Reports*): October 1987

Volume 108 (*Initial Reports*): March 1988

Volumes 106/109/111 (*Initial Reports*): March 1988

Volume 110 (*Initial Reports*): April 1988

Volume 112 (*Initial Reports*): August 1988

#### Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77840. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

**Printed December 1988**

# Foreword

By the National Science Foundation

The scientists of the Ocean Drilling Program (ODP) have embarked on what could prove to be one of the most important earth science initiatives of the decade—an initiative rivaling in scope and impact the exploration of the frontiers of outer space. The program explores our planet's last frontier—the Earth's structure and history as it is revealed beneath the oceans. The scope of the program's scientific goals excites the imagination, challenges the intellect, and enhances the spirit of cooperation among peoples in countries around the world.

Between 1872 and 1876, HMS *Challenger* undertook the world's first major oceanographic expedition. That expedition greatly expanded man's knowledge of the world's oceans and revolutionized our ideas about planet Earth. From 1968 to 1983, another ship named *Challenger* logged more than 375,000 miles on 96 voyages across every ocean for the Deep Sea Drilling Project (DSDP), operated by Scripps Institution of Oceanography. Among the project's many remarkable discoveries were the confirmation of seafloor spreading and the establishment of the relative youth of the seafloor, thus verifying the dynamic and changing nature of the Earth's crust.

Today, the Ocean Drilling Program, which began in 1983, brings new resources to bear on scientific ocean drilling. A new drillship is in operation—the *JOIDES Resolution*—one of the world's most modern and best equipped drillships with enhanced capability for drilling and coring in polar areas and rough weather, expanded laboratory space, facilities for more scientists, and a major drill-hole logging program. The name of the ship was derived from the international scientific partnership that directs the program—the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES)—and from the flagship of Captain Cook's second voyage to the Pacific Ocean in the late 18th century. Texas A&M University is responsible for science operations in the program, and Lamont-Doherty Geological Observatory is responsible for the logging program.

The Ocean Drilling Program truly has international participation. In 1975, the International Phase of Ocean Drilling began with member nations—the U.S.A., U.S.S.R., the Federal Republic of Germany, Japan, the United Kingdom, and France—all providing funds and scientific guidance for the project. Today, ODP partners include the U.S.A., Canada, France, the Federal Republic of Germany, Japan, the United Kingdom, and the European Science Foundation, which represents Sweden, Finland, Norway, Iceland, Denmark, Belgium, the Netherlands, Spain, Switzerland, Italy, Greece, and Turkey.

The National Science Foundation, with funds contributed by the United States and international partners, supports the scientific operations and planning for the ODP through a contract with Joint Oceanographic Institutions, Inc. (JOI).

The information gained by the program leads to a better understanding of the Earth and its dynamic processes. Drilled sediment cores and logs reveal clues to past climatic history and tie into parallel studies of paleoclimates from glacial ice cores drilled on the continents. Understanding these sediment cores will enable scientists to complete the map of major geologically active regions of the Earth, and to identify processes that lead to dynamic change such as earthquakes, volcanic eruptions, and mountain and continental growth. We are far from being able to predict such changes accurately now; but with the new tools and understanding, the accuracy of such predictions can be improved. This better understanding of the Earth's system(s) will allow us to identify regions of potential mineral and energy resource development, an issue of worldwide human interest. The Ocean Drilling Program is not in itself aimed at finding resources, but the knowledge of the Earth's processes that is gained through such a basic research program will inevitably provide pieces of information required for such resource discovery and exploitation.

The program is fully under way in its aim to further the understanding of the Earth's dynamic systems. People of our planet will benefit directly and indirectly from this research in both their daily living and work activities. This multinational endeavor will perhaps foster other cooperative efforts in science or among societies. The Ocean Drilling Program has distinguished ancestors in the original *Resolution* and *Challenger* expeditions and the Deep Sea Drilling Project. The National Science Foundation is proud to be playing a leading role in this program, and we are looking forward to significant and innovative science for many years to come.

Erich Bloch  
Director  
National Science Foundation

Washington, D.C.

# Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents results from the Ocean Drilling Program (ODP), where scientists use a specially equipped ocean drilling ship to sample and measure the properties of the submerged part of the Earth's crust. These data are then synthesized with other information to yield new insights into earth processes.

These results address the scientific goals of the program, which include providing a global description of geological and geophysical structures and materials, studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations, and studying passive and active continental margins. In addition, the ODP data support the study of sea-level and ocean-circulation changes, the effects of the Earth's orbital variations on climate, and the study of processes and mechanisms of evolution from the biological records in the cores which are recovered from drilling.

The Ocean Drilling Program is a partnership of scientists and governments. Overall scientific policy and management guidance is provided by Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES), which consists of committees and panels made up of representatives of the participating institutions and other scientific and engineering experts. The JOIDES Executive Committee (EXCOM) provides general oversight; the JOIDES Planning Committee (PCOM) is the focal point for all scientific planning for the ODP and is key to the scientific success of the program.

The PCOM has a network of panels and working groups which screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical survey data and other safety and siting information. PCOM uses the recommendations of these panels and committees to select drilling targets, to specify the major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists. The science operator, Texas A&M University, in turn is responsible for planning the detailed ship's operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with PCOM and the cognizant panels.

Many of the scientific goals can be met only with new technology. Thus the program has identified engineering goals, which include the ability to start a hole and to core on bare rock at mid-ocean ridge sites, to drill in high-temperature and corrosive regions typical of hydrothermal areas, and to core in high latitudes with minimum interference from high seas and sea ice. To meet these needs, the program operates a specially equipped drillship, the *JOIDES Resolution*, which contains laboratories and equipment that are state-of-the-art, and carries a major new logging program.

The ship, registered as SEDCO/BP 471 after her owners and her length in feet (144 meters), is 70 feet (21 meters) wide, and has a displacement of 16,595 long tons. Her derrick towers 200 feet (61 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails

with a scientific and technical crew of 50 and a ship's crew of 65.

Logging is a major part of the overall operation. The program provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a borehole televiwer is available for imaging the well-bore wall, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the well bore, and a vertical seismic profiler records reflectors from below the total depth of the hole.

Texas A&M University serves as science operator for the Ocean Drilling Program. In this capacity, they operate and staff the drillship to collect cores from JOIDES-designated sites from around the world. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and by providing logistical and technical support for shipboard scientific teams. Onshore, Texas A&M manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of the scientific results. Lamont-Doherty Geological Observatory (LDGO) of Columbia University manages the program's logging operations, which include processing the data and provision of assistance to scientists in data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDGO. Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at three sites: ODP Pacific and Indian Ocean cores at Texas A&M University, ODP and DSDP Atlantic and Antarctic cores at Lamont-Doherty Geological Observatory, and DSDP Pacific and Indian Ocean cores at Scripps Institution of Oceanography.

International oversight and coordination are provided by the ODP Council, a governmental consultative body of partner country representatives, chaired by the United States, which periodically reviews the general progress of the program and discusses financial plans and other management issues. Joint Oceanographic Institutions, Inc., a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor and manages the ODP. JOI is responsible for seeing that the scientific objectives and plans are translated into scientific operations consistent with JOIDES recommendations and budgetary constraints.

Scientific achievements of the ODP already include new data on early seafloor spreading and how continents separate and their margins evolve. We have new insight into glacial cycles and the fluctuations of currents throughout geological time. Technical achievements include the first bare-rock coring, and logging data more accurate and complete than ever before. JOI is pleased to have played a facilitating role in the Ocean Drilling Program.

D. James Baker  
President  
Joint Oceanographic Institutions, Inc.

Washington, D.C.

# Preface

The *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* contain specialty papers presenting the results of up to one and one-half years of research in various aspects of scientific ocean drilling. I acknowledge with thanks the authors of the papers published in this volume, who thereby have enabled future investigators to gain ready access to the results of their research.

Each of the papers submitted to a *Scientific Results* volume undergoes rigorous peer review by at least two specialists in the author's research field. A paper typically goes through one or more revision cycles before being accepted for publication. Our goal is to maintain a peer-review system comparable to those of the most highly regarded journals in the geological sciences.

*Scientific Results* volumes may also contain short reports consisting of good data that are not yet ready for final interpretation. Papers in this category are segregated in a section in the back of the volume called Data Reports. Although no interpretation is permitted, these papers ordinarily contain a section on methodology or procedures. Data Report papers are read carefully by at least one specialist to make sure they are well organized, comprehensive, and discuss the techniques thoroughly. A paper that has undergone regular peer review is not eligible for later consideration as a Data Report.

Reviewers of manuscripts for this volume, whose efforts are so essential to the success of the publication, are listed in the front portion of the book, without attribution to a particular manuscript. On behalf of the Ocean Drilling Program, I extend sincere appreciation to these reviewers for giving so generously of their time and efforts in ensuring that only papers of high scientific quality are published in the *Proceedings*.

Philip D. Rabinowitz

# TABLE OF CONTENTS

## VOLUME 101—SCIENTIFIC RESULTS

### SECTION 1: PALEONTOLOGICAL STUDIES

1. NEOGENE PLANKTONIC FORAMINIFER BIOSTRATIGRAPHY, ODP LEG 101, BAHAMAS .....3  
A. J. Melillo
2. REWORKED AND REDEPOSITED LARGER FORAMINIFERS ON SLOPES AND IN BASINS OF THE BAHAMAS, LEG 101 .....47  
E. Fourcade and J. Butterlin
3. CALCAREOUS NANNOFOSSIL BIOSTRATIGRAPHY FROM LEG 101, NORTHERN BAHAMAS .....63  
D. K. Watkins and J. W. Verbeek
4. OLIGOCENE CALCAREOUS-NANNOFOSSIL BIOSTRATIGRAPHY FROM LEG 101, SITE 628, LITTLE BAHAMA BANK SLOPE .....87  
M. J. Moran and D. K. Watkins
5. CENOZOIC RADIOLARIANS FROM OCEAN DRILLING PROGRAM LEG 101, BAHAMAS (SITES 627 AND 628) AND SURROUNDING REGION .....105  
A. A. Palmer
6. CENOZOIC RADIOLARIANS FROM DSDP SITE 98, NORTHWEST PROVIDENCE CHANNEL, BAHAMAS: CORRELATION WITH ODP SITE 634.....117  
A. A. PALMER
7. ALBIAN-CENOMANIAN DINOFLAGELLATE CYSTS FROM SITES 627 AND 635, LEG 101, BAHAMAS .....121  
E. Masure
8. CENOZOIC OSTRACODES FROM HOLE 628A, ODP LEG 101, BAHAMAS.....139  
C. Guernet and E. Fourcade
9. MIDDLE CRETACEOUS OSTRACODES FROM LEG 101, HOLES 627B and 635B, BAHAMAS .....153  
R. Damotte
10. PALEOENVIRONMENTAL SIGNIFICANCE OF SILICEOUS SPONGE SPICULES FROM SITES 627 AND 628, LITTLE BAHAMA BANK, OCEAN DRILLING PROGRAM LEG 101.....159  
A. A. Palmer

### SECTION 2: SEDIMENTOLOGICAL STUDIES

11. CLAY MINERALS AND THEIR DIAGENESIS IN CARBONATE-RICH SEDIMENTS (LEG 101, SITES 626 AND 627) .....171  
H. Hüggenberg and Hans Füchtbauer
12. MIDDLE MIOCENE CARBONATE GRAVITY FLOWS IN THE STRAITS OF FLORIDA AT SITE 626 .....179  
C. S. Fulthorpe and A. J. Melillo
13. PETROGRAPHY OF LATE ALBIAN PLATFORM-INTERIOR FACIES STRATA: LEG 101, SITE 627, LITTLE BAHAMA BANK .....193  
R. P. Freeman-Lynde
14. QUATERNARY AND PLOCENE TURBIDITES IN THE BAHAMAS, LEG 101, SITES 628, 632, and 635 .....203  
G. Kuhn and D. Meischner

15. SITE 632: PLIOCENE-PLEISTOCENE SEDIMENTATION CYCLES IN A BAHAMIAN BASIN .....	213
J.J.G. Reyrner, W. Schlager, and A. W. Droxler	
16. PLIOCENE-PLEISTOCENE VARIATIONS IN ARAGONITE CONTENT AND PLANKTONIC OXYGEN-ISOTOPE RECORD IN BAHAMIAN PERIPLATFORM OOZE, HOLE 633A .....	221
A. W. Droxler, C. H. Bruce, W. W. Sager, and D. H. Watkins	
17. PETROGRAPHY AND STABLE OXYGEN AND CARBON ISOTOPE COMPOSITIONS OF CAMPANIAN GRAINSTONES AND RUDSTONES, NORTHEAST PROVIDENCE CHANNEL, BAHAMAS: ODP LEG 101, HOLE 634A .....	245
W. R. McClain, R. P. Freeman-Lynde, and K. C. Lohmann	
18. DEEP-MARINE ORIGIN OF EQUANT SPAR CEMENTS IN OLIGOCENE-MIOCENE PERIREEF BOUNDSTONES, LEG 101, SITE 635, NORTHEAST PROVIDENCE CHANNEL, BAHAMAS .....	255
R. P. Freeman-Lynde, W. R. McClain, and K. C. Lohmann	
19. SEISMIC SEDIMENTOLOGIC INTERPRETATION OF A CARBONATE SLOPE, NORTH MARGIN OF LITTLE BAHAMA BANK .....	263
G. M. Harwood and P. A. Towers	
20. A REGIONAL PERSPECTIVE OF SHALLOW-BURIAL DIAGENESIS OF DEEP-WATER PERIPLATFORM CARBONATES FROM THE NORTHERN BAHAMAS.....	279
G. R. Dix and H. T. Mullins	

**SECTION 3: PHYSICAL PROPERTIES AND PALEOMAGNETISM**

21. PHYSICAL PROPERTIES OF CARBONATE TURBIDITE SEQUENCES SURROUNDING THE BAHAMAS—IMPLICATIONS FOR SLOPE STABILITY AND FLUID MOVEMENTS .....	305
G. P. Eberli	
22. GEOTECHNICAL PROPERTIES OF SEDIMENTS IN A CARBONATE-SLOPE ENVIRONMENT: OCEAN DRILLING PROGRAM SITE 630, NORTHERN LITTLE BAHAMA BANK.....	315
D. Lavoie	
23. PALEOMAGNETISM OF OCEAN DRILLING PROGRAM LEG 101 SEDIMENTS: MAGNETOSTRATIGRAPHY, MAGNETIC DIAGENESIS, AND PALEOLATITUDES .....	327
W. W. Sager	

**SECTION 4: GEOCHEMICAL STUDIES**

24. INTERSTITIAL-WATER CHEMISTRY AND DIAGENESIS OF PERIPLATFORM SEDIMENTS FROM THE BAHAMAS, ODP LEG 101.....	363
P. K. Swart and M. Guzikowski	
25. ORGANIC-GEOCHEMICAL CHARACTER AND HYDROCARBON-SOURCE POTENTIAL OF SITE 635 .....	381
B. J. Katz	

**SECTION 5: REGIONAL GEOLOGICAL STUDIES**

26. SEISMIC STRATIGRAPHIC IMPLICATIONS OF ODP LEG 101 SITE SURVEYS.....	391
J. A. Austin, Jr., J. I. Ewing, J. W. Ladd, H. T. Mullins, and R. E. Sheridan	
27. BOREHOLES AT GREAT ISAAC AND SITE 626 AND THE HISTORY OF THE FLORIDA STRAITS .....	425
W. Schlager, F. Bourgeois, G. Mackenzie, and J. Smit	

28. STRUCTURE AND EVOLUTION OF BAHAMIAN DEEP-WATER CHANNELS: INSIGHTS FROM <i>IN-SITU</i> GEOPHYSICAL AND GEOCHEMICAL MEASUREMENTS . . . . .	439
C. F. Williams, R. N. Anderson, and J. A. Austin, Jr.	

**SECTION 6: CRUISE SYNTHESIS**

29. LEG 101—AN OVERVIEW . . . . .	455
Leg 101 Scientific Party
