

Schematic evolution of the west Iberian branch of the North Atlantic rift in the region drilled during Leg 103 of the Ocean Drilling Program. Solid arrows indicate plate motions with respect to a fixed Eurasia; open arrows indicate relative localized motion; wide, solid lines indicate spreading centers. After Mauffret, A., Mougnot, D., Miles, P. R., and Malod, J. A., Results from a multichannel seismic reflection profile of the Tagus abyssal plain (Portugal): Comparison with the Canadian margin, in Tankard, A. (Ed.), *Extensional Tectonics and Stratigraphy of the North Atlantic Margins*: AAPG Memoir, 46 (in preparation). **A.** Early Tithonian Stage: oceanic spreading in the Tagus abyssal plain. The motion of Iberia implies the formation of a rift between Africa and Iberia. A carbonate platform existed in the area drilled during Leg 103. **B.** Aptian Stage: a westward jump of the west Iberian spreading center leads to the formation of a unique three-ridge triple junction between North America, Iberia, and Africa. In the area where Leg 103 was drilled, continental rifting is ending. Oceanic spreading will begin just after this stage.

in cooperation with the
NATIONAL SCIENCE FOUNDATION
and
JOINT OCEANOGRAPHIC INSTITUTIONS, INC.

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Department of Energy, Mines and Resources (Canada)

Deutsche Forschungsgemeinschaft (Federal Republic of Germany)

Institut Français de Recherche pour l'Exploitation de la Mer (France)

National Science Foundation (United States)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

It is recommended that reference to the whole or to part of this volume be made in one of the following forms, as appropriate:

Boillot, G., Winterer, E. L., et al., 1987. *Proc. ODP, Sci. Results*, 103: College Station, TX (Ocean Drilling Program).

Stein, R., and Rullkötter, J., 1988. Organofacies reconstruction and lipid geochemistry of sediments from the Galicia margin, northeast Atlantic (ODP Leg 103). *In* Boillot, G., Winterer, E. L., et al., *Proc. ODP, Sci. Results*, 103: College Station, TX (Ocean Drilling Program), ___-___.

Effective Publication Dates of ODP *Proceedings*

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 108 (*Initial Reports*): March 1988
Volumes 106/109/111 (*Initial Reports*): March 1988
Volume 110 (*Initial Reports*): April 1988
Volume 112 (*Initial Reports*): August 1988
Volume 113 (*Initial Reports*): September 1988
Volume 101/102 (*Scientific Results*): December 1988

Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77840. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

Printed December 1988

Foreword

By the National Science Foundation

The scientists of the Ocean Drilling Program (ODP) have embarked on what could prove to be one of the most important earth science initiatives of the decade—an initiative rivaling in scope and impact the exploration of the frontiers of outer space. The program explores our planet's last frontier—the Earth's structure and history as it is revealed beneath the oceans. The scope of the program's scientific goals excites the imagination, challenges the intellect, and enhances the spirit of cooperation among peoples in countries around the world.

Between 1872 and 1876, HMS *Challenger* undertook the world's first major oceanographic expedition. That expedition greatly expanded man's knowledge of the world's oceans and revolutionized our ideas about planet Earth. From 1968 to 1983, another ship named *Challenger* logged more than 375,000 miles on 96 voyages across every ocean for the Deep Sea Drilling Project (DSDP), operated by Scripps Institution of Oceanography. Among the project's many remarkable discoveries were the confirmation of seafloor spreading and the establishment of the relative youth of the seafloor, thus verifying the dynamic and changing nature of the Earth's crust.

Today, the Ocean Drilling Program, which began in 1983, brings new resources to bear on scientific ocean drilling. A new drillship is in operation—the *JOIDES Resolution*—one of the world's most modern and best equipped drillships with enhanced capability for drilling and coring in polar areas and rough weather, expanded laboratory space, facilities for more scientists, and a major drill-hole logging program. The name of the ship was derived from the international scientific partnership that directs the program—the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES)—and from the flagship of Captain Cook's second voyage to the Pacific Ocean in the late 18th century. Texas A&M University is responsible for science operations in the program, and Lamont-Doherty Geological Observatory is responsible for the logging program.

The Ocean Drilling Program truly has international participation. In 1975, the International Phase of Ocean Drilling began with member nations—the U.S.A., U.S.S.R., the Federal Republic of Germany, Japan, the United Kingdom, and France—all providing funds and scientific guidance for the project. Today, ODP partners include the U.S.A., Canada, France, the Federal Republic of Germany, Japan, the United Kingdom, and the European Science Foundation, which represents Sweden, Finland, Norway, Iceland, Denmark, Belgium, the Netherlands, Spain, Switzerland, Italy, Greece, and Turkey.

The National Science Foundation, with funds contributed by the United States and international partners, supports the scientific operations and planning for the ODP through a contract with Joint Oceanographic Institutions, Inc. (JOI).

The information gained by the program leads to a better understanding of the Earth and its dynamic processes. Drilled sediment cores and logs reveal clues to past climatic history and tie into parallel studies of paleoclimates from glacial ice cores drilled on the continents. Understanding these sediment cores will enable scientists to complete the map of major geologically active regions of the Earth, and to identify processes that lead to dynamic change such as earthquakes, volcanic eruptions, and mountain and continental growth. We are far from being able to predict such changes accurately now; but with the new tools and understanding, the accuracy of such predictions can be improved. This better understanding of the Earth's system(s) will allow us to identify regions of potential mineral and energy resource development, an issue of worldwide human interest. The Ocean Drilling Program is not in itself aimed at finding resources, but the knowledge of the Earth's processes that is gained through such a basic research program will inevitably provide pieces of information required for such resource discovery and exploitation.

The program is fully under way in its aim to further the understanding of the Earth's dynamic systems. People of our planet will benefit directly and indirectly from this research in both their daily living and work activities. This multinational endeavor will perhaps foster other cooperative efforts in science or among societies. The Ocean Drilling Program has distinguished ancestors in the original *Resolution* and *Challenger* expeditions and the Deep Sea Drilling Project. The National Science Foundation is proud to be playing a leading role in this program, and we are looking forward to significant and innovative science for many years to come.

Erich Bloch
Director
National Science Foundation

Washington, D.C.

Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents results from the Ocean Drilling Program (ODP), where scientists use a specially equipped ocean drilling ship to sample and measure the properties of the submerged part of the Earth's crust. These data are then synthesized with other information to yield new insights into earth processes.

These results address the scientific goals of the program, which include providing a global description of geological and geophysical structures and materials, studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations, and studying passive and active continental margins. In addition, the ODP data support the study of sea-level and ocean-circulation changes, the effects of the Earth's orbital variations on climate, and the study of processes and mechanisms of evolution from the biological records in the cores which are recovered from drilling.

The Ocean Drilling Program is a partnership of scientists and governments. Overall scientific policy and management guidance is provided by Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES), which consists of committees and panels made up of representatives of the participating institutions and other scientific and engineering experts. The JOIDES Executive Committee (EXCOM) provides general oversight; the JOIDES Planning Committee (PCOM) is the focal point for all scientific planning for the ODP and is key to the scientific success of the program.

The PCOM has a network of panels and working groups which screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical survey data and other safety and siting information. PCOM uses the recommendations of these panels and committees to select drilling targets, to specify the major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists. The science operator, Texas A&M University, in turn is responsible for planning the detailed ship's operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with PCOM and the cognizant panels.

Many of the scientific goals can be met only with new technology. Thus the program has identified engineering goals, which include the ability to start a hole and to core on bare rock at mid-ocean ridge sites, to drill in high-temperature and corrosive regions typical of hydrothermal areas, and to core in high latitudes with minimum interference from high seas and sea ice. To meet these needs, the program operates a specially equipped drillship, the *JOIDES Resolution*, which contains laboratories and equipment that are state-of-the-art, and carries a major new logging program.

The ship, registered as SEDCO/BP 471 after her owners and her length in feet (144 meters), is 70 feet (21 meters) wide, and has a displacement of 16,595 long tons. Her derrick towers 200 feet (61 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails

with a scientific and technical crew of 50 and a ship's crew of 65.

Logging is a major part of the overall operation. The program provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a borehole televiewer is available for imaging the well-bore wall, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the well bore, and a vertical seismic profiler records reflectors from below the total depth of the hole.

Texas A&M University serves as science operator for the Ocean Drilling Program. In this capacity, they operate and staff the drillship to collect cores from JOIDES-designated sites from around the world. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and by providing logistical and technical support for shipboard scientific teams. Onshore, Texas A&M manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of the scientific results. Lamont-Doherty Geological Observatory (LDGO) of Columbia University manages the program's logging operations, which include processing the data and provision of assistance to scientists in data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDGO. Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at three sites: ODP Pacific and Indian Ocean cores at Texas A&M University, ODP and DSDP Atlantic and Antarctic cores at Lamont-Doherty Geological Observatory, and DSDP Pacific and Indian Ocean cores at Scripps Institution of Oceanography.

International oversight and coordination are provided by the ODP Council, a governmental consultative body of partner country representatives, chaired by the United States, which periodically reviews the general progress of the program and discusses financial plans and other management issues. Joint Oceanographic Institutions, Inc., a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor and manages the ODP. JOI is responsible for seeing that the scientific objectives and plans are translated into scientific operations consistent with JOIDES recommendations and budgetary constraints.

Scientific achievements of the ODP already include new data on early seafloor spreading and how continents separate and their margins evolve. We have new insight into glacial cycles and the fluctuations of currents throughout geological time. Technical achievements include the first bare-rock coring, and logging data more accurate and complete than ever before. JOI is pleased to have played a facilitating role in the Ocean Drilling Program.

D. James Baker
President
Joint Oceanographic Institutions, Inc.

Preface

The *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* contain specialty papers presenting the results of up to one and one-half years of research in various aspects of scientific ocean drilling. I acknowledge with thanks the authors of the papers published in this volume, who thereby have enabled future investigators to gain ready access to the results of their research.

Each of the papers submitted to a *Scientific Results* volume undergoes rigorous peer review by at least two specialists in the author's research field. A paper typically goes through one or more revision cycles before being accepted for publication. Our goal is to maintain a peer-review system comparable to those of the most highly regarded journals in the geological sciences.

Scientific Results volumes may also contain short reports consisting of good data that are not yet ready for final interpretation. Papers in this category are segregated in a section in the back of the volume called Data Reports. Although no interpretation is permitted, these papers ordinarily contain a section on methodology or procedures. Data Report papers are read carefully by at least one specialist to make sure they are well organized, comprehensive, and discuss the techniques thoroughly. A paper that has undergone regular peer review is not eligible for later consideration as a Data Report.

Reviewers of manuscripts for this volume, whose efforts are so essential to the success of the publication, are listed in the front portion of the book, without attribution to a particular manuscript. On behalf of the Ocean Drilling Program, I extend sincere appreciation to these reviewers for giving so generously of their time and efforts in ensuring that only papers of high scientific quality are published in the *Proceedings*.

TABLE OF CONTENTS

VOLUME 103—SCIENTIFIC RESULTS

SECTION 1: REGIONAL AND GEOPHYSICAL STUDIES

1. PRE-MESOZOIC BASEMENT OF THE WESTERN IBERIAN CONTINENTAL MARGIN AND ITS PLACE IN THE VARISCAN BELT..... 3
R. Capdevila and D. Mougenot
2. SEISMIC STRATIGRAPHY OFF GALICIA 13
A. Mauffret and L. Montadert
3. STRUCTURAL MAP OF THE GALICIA MARGIN 31
M. Thommeret, G. Boillot, and J.-C. Sibuet
4. PRELIMINARY RESULTS OF THE GALINAUTE CRUISE: DIVES OF THE SUBMERSIBLE *NAUTILUS* ON THE WESTERN GALICIA MARGIN, SPAIN 37
G. Boillot, M. C. Comas, J. Girardeau, J. Kornprobst, J.-P. Loreau, J. Malod, D. Mougenot, and M. Moullade

SECTION 2: CONTINENTAL BASEMENT AND TITHONIAN CARBONATE (PRE-RIFT)

5. COMPOSITION OF RHYOLITES FROM CONTINENTAL "BASEMENT," ODP SITE 639 55
C. A. Evans
6. MICROFACIES OF UPPER JURASSIC LIMESTONES, ODP SITE 639..... 59
M. Moullade, J.-P. Loreau, J. Thurow, P. Cros, and M. Cousin
7. JURASSIC CORAL GENERA FROM ODP SITE 639, ATLANTIC OCEAN, WEST OF SPAIN 89
G. A. Gill and J.-P. Loreau
8. LIMESTONE DIAGENESIS AND DOLOMITIZATION OF TITHONIAN CARBONATES AT ODP SITE 639 (ATLANTIC OCEAN, WEST OF SPAIN).....105
J.-P. Loreau and P. Cros
9. CHARACTERIZATION OF DIAGENETIC FLUIDS OF THE UPPER JURASSIC-LOWER CRETACEOUS CARBONATE PLATFORM OF THE GALICIA MARGIN AT OCEAN DRILLING PROGRAM SITE 639: EVIDENCE FOR DOLOMITIZATION BY HYPERSALINE BRINES145
J. A. Haggerty and M. P. Smith
10. DIAGENESIS OF THE UPPER JURASSIC-LOWER CRETACEOUS CARBONATE PLATFORM OF THE GALICIA MARGIN AT OCEAN DRILLING PROGRAM SITE 639155
M. M. Daniel and J. A. Haggerty
11. LATE JURASSIC CARBONATE PLATFORM OF THE GALICIA MARGIN.....171
L. F. Jansa, M. C. Comas, M. Sarti, and J. A. Haggerty

SECTION 3: PERIDOTITE STUDIES

12. GALICIA MARGIN PERIDOTITES: UNDEPLETED ABYSSAL PERIDOTITES FROM THE NORTH ATLANTIC195
C. A. Evans and J. Girardeau
13. STRUCTURAL ANALYSIS OF PLAGIOCLASE-BEARING PERIDOTITES EMPLACED AT THE END OF CONTINENTAL RIFTING: HOLE 637A, ODP LEG 103 ON THE GALICIA MARGIN209
J. Girardeau, C. A. Evans, and M.-O. Beslier

14.	HYDROTHERMAL ALTERATION OF THE PERIDOTITES CORED AT THE OCEAN/CONTINENT BOUNDARY OF THE IBERIAN MARGIN: PETROLOGIC AND STABLE ISOTOPE EVIDENCE	225
	P. Agrinier, C. Mével, and J. Girardeau	
15.	LOW-TEMPERATURE ALTERATION OF PERIDOTITE, HOLE 637A	235
	C. A. Evans and M. Baltuck	
16.	HYDROTHERMAL ALTERATION OF PERIDOTITE FROM THE GALICIA MARGIN, IBERIAN PENINSULA	241
	K. L. Kimball and C. A. Evans	
17.	PLAGIOCLASE-BEARING ULTRAMAFIC TECTONITES FROM THE GALICIA MARGIN (LEG 103, SITE 637): COMPARISON OF THEIR ORIGIN AND EVOLUTION WITH LOW-PRESSURE ULTRAMAFIC BODIES IN WESTERN EUROPE	253
	J. Kornprobst and A. Tabit	
18.	ACOUSTIC PROPERTIES OF ALTERED PERIDOTITE AT SITE 637 FROM LABORATORY AND SONIC WAVEFORM DATA	269
	D. Goldberg and B. Zinszner	
SECTION 4: POST-JURASSIC (SYN- AND POST-RIFT): PALEONTOLOGY, BIOFACIES, AND BIOSTRATIGRAPHY STUDIES		
19.	CENOZOIC CALCAREOUS NANNOFOSSILS FROM THE GALICIA MARGIN, OCEAN DRILLING PROGRAM LEG 103	279
	W. Wei, J. A. Bergen, and J. Applegate	
20.	CRETACEOUS CALCAREOUS NANNOFOSSIL BIOSTRATIGRAPHY OF SEDIMENTS RECOVERED FROM THE GALICIA MARGIN, ODP LEG 103	293
	J. L. Applegate and J. A. Bergen	
21.	AGGLUTINATED BENTHIC FORAMINIFERS FROM THE UPPER CRETACEOUS VARIEGATED CLAYS OF THE NORTH ATLANTIC OCEAN (DSDP LEG 93 AND ODP LEG 103)	349
	M. Moullade, W. Kuhnt, and J. Thurow	
22.	CRETACEOUS RADIOLARIANS OF THE NORTH ATLANTIC OCEAN: ODP LEG 103 (SITES 638, 640, AND 641) AND DSDP LEGS 93 (SITE 603) AND 47B (SITE 398)	379
	J. Thurow	
23.	STRATIGRAPHIC IMPLICATIONS OF EARLY CRETACEOUS SPORES AND POLLEN GRAINS AT HOLES 638B, 638C, AND 641C, LEG 103, OFF THE IBERIAN MARGIN, EASTERN NORTH ATLANTIC	419
	J. Taugourdeau-Lantz	
24.	PALYNOLOGY OF THE VALANGINIAN-BARREMIAN IN HOLE 638B, BARREMIAN-ALBIAN IN HOLE 641C, AND TURONIAN IN HOLE 641A, OCEAN DRILLING PROGRAM LEG 103	429
	W. S. Drugg and D. Habib	
25.	BERRIASIAN TO APTIAN DINOFLAGELLATE CYSTS FROM THE GALICIA MARGIN, OFFSHORE SPAIN, SITES 638 AND 639, ODP LEG 103	433
	E. Masure	
26.	REMARKS ON CRETACEOUS-TERTIARY ICHTHYOLITH STRATIGRAPHY IN THE ATLANTIC, OCEAN DRILLING PROGRAM LEG 103	445
	P. S. Doyle	
SECTION 5: POST-JURASSIC (SYN- AND POST-RIFT): GEOCHEMISTRY, MINERALOGY, AND SEDIMENTOLOGY STUDIES (PALEOENVIRONMENT AND DIAGENESIS)		
27.	CLAY MINERALOGY OF SEDIMENTS FROM THE GALICIA MARGIN, ODP LEG 103	461
	A. W. Meyer and T. A. Davies	

28.	INTERSTITIAL-WATER STUDIES OF SAMPLES FROM THE PASSIVE GALICIA MARGIN, NORTHEAST ATLANTIC, OCEAN DRILLING PROGRAM LEG 103	477
	J. A. Haggerty and J. B. Fisher	
29.	VARIATIONS IN TRACE ELEMENT CONTENTS AND ISOTOPIC COMPOSITIONS OF LOWER CRETACEOUS CARBONATES FROM THE GALICIA MARGIN (ODP LEG 103): RECONSTRUCTION OF THE PALEOCHEMISTRY OF THE EARLY CRETACEOUS OCEAN	489
	S. Clausen, M. Renard, and G. Richebois	
30.	COMPOSITION OF LOWER CRETACEOUS SANDSTONE, GALICIA MARGIN	505
	J. A. Johnson	
31.	RESEDIMENTATION AND DIAGENESIS, INCLUDING SILICIFICATION, OF BARREMIAN-APTIAN SHALLOW-WATER CARBONATES FROM THE GALICIA MARGIN, EASTERN NORTH ATLANTIC, AT OCEAN DRILLING PROGRAM SITE 641	513
	J. A. Haggerty and S. H. Germann	
32.	DIAGENETIC HISTORY OF CRETACEOUS RADIOLARIANS, NORTH ATLANTIC OCEAN (ODP LEG 103 AND DSDP HOLES 398D AND 603B)	531
	J. Thurow	
33.	ORGANIC GEOCHEMISTRY OF CRETACEOUS BLACK SHALES AND ADJACENT STRATA FROM THE GALICIA MARGIN, NORTH ATLANTIC OCEAN.....	557
	K. W. Dunham, P. A. Meyers, and E. S. Ho	
34.	ORGANOFACIES RECONSTRUCTION AND LIPID GEOCHEMISTRY OF SEDIMENTS FROM THE GALICIA MARGIN, NORTHEAST ATLANTIC (ODP LEG 103).....	567
	R. Stein and J. Rullkötter	
35.	THE CENOMANIAN/TURONIAN BOUNDARY EVENT (CTBE) AT HOLE 641A, ODP LEG 103 (COMPARED WITH THE CTBE INTERVAL AT SITE 398)	587
	J. Thurow, M. Moullade, H.-J. Brumsack, E. Masure, J. Taugourdeau-Lantz, and K. Dunham	
36.	LATE CENOZOIC SEDIMENTARY FACIES AND PROCESSES IN THE IBERIAN ABYSSAL PLAIN, SITE 637, ODP LEG 103.....	635
	M. C. Comas and A. Maldonado	
SECTION 6: PALEOMAGNETIC STUDIES		
37.	EARLY CRETACEOUS AND TITHONIAN MAGNETOSTRATIGRAPHY OF THE GALICIA MARGIN (OCEAN DRILLING PROGRAM LEG 103)	659
	J. G. Ogg	
SECTION 7: REGIONAL SYNTHESIS: TIMING, PROCESSES, AND COMPARISONS		
38.	OCEAN DRILLING PROGRAM LEG 103 BIOSTRATIGRAPHIC SYNTHESIS	685
	M. Moullade, J. L. Applegate, J. A. Bergen, J. Thurow, P. S. Doyle, W. S. Drugg, D. Habib, E. Masure, J. Ogg, and J. Taugourdeau-Lantz	
39.	THE SOURCE AREA FOR LOWER CRETACEOUS CLASTIC SEDIMENTS OF THE GALICIA MARGIN: GEOLOGY AND TECTONIC AND EROSIONAL HISTORY.....	697
	E. L. Winterer, J. S. Gee, and R. J. Van Waasbergen	
40.	SUBSIDENCE AND DEEPENING OF THE GALICIA MARGIN: THE PALEO-ENVIRONMENTAL CONTROL	733
	M. Moullade, M.-F. Brunet, and G. Boillot	
41.	RIFTING OF THE GALICIA MARGIN: CRUSTAL THINNING AND EMPLACEMENT OF MANTLE ROCKS ON THE SEAFLOOR.....	741
	G. Boillot, J. Girardeau, and J. Kornprobst	

42. MESOZOIC EVOLUTION OF THE LUSITANIAN BASIN: COMPARISON WITH THE ADJACENT MARGIN	757
C. Montenat, F. Guery, and P. Y. Berthou	
43. A SEISMIC COMPARISON OF THE EARLY STRATIGRAPHIC EVOLUTION OF CONJUGATE PASSIVE CONTINENTAL MARGINS: THE NEWFOUNDLAND/ FLEMISH BASIN AND THE EASTERN IBERIAN ABYSSAL PLAIN SOUTH OF GALICIA BANK	777
K. J. Meador and J. A. Austin, Jr.	
44. MESOZOIC-CENOZOIC GEOLOGY OF THE EASTERN MARGIN OF THE GRAND BANKS AND ITS RELATION TO GALICIA BANK	787
A. C. Grant, L. F. Jansa, K. D. McAlpine, and A. Edwards	
45. DRILLING ON THE GALICIA MARGIN: RETROSPECT AND PROSPECT	809
G. Boillot and E. L. Winterer

SCIENTIFIC RESULTS VOLUME 103 CHAPTER 39: PLATE 2. SEISMIC-REFLECTION PROFILE GP-101 COLLECTED ON THE GALICIA MARGIN IN THE VICINITY OF LEG 103 DRILL SITES. PROFILE LOCATION IS SHOWN IN FIGURE 3; INTERPRETIVE LINE DRAWING IS SHOWN IN FIGURE 2B. THE PROFILE WAS MADE BY THE INSTITUT FRANÇAIS DU PÉTROLE AND MADE AVAILABLE THROUGH DR. L. MONTADERT.
