

Volume 112: Chapter 5: Plate 1. (A) Line 14 migrated time section showing interpreted seismic sequences. The structural interpretation has been simplified. See text for discussion. (B) Line 13 migrated time section showing interpreted seismic sequences. The structural interpretation has been simplified. Note the BSR (bottom-simulating reflector), which represents the base of a gas-hydrate layer. Reflector amplitude above this level is significantly muted. See text for discussion. (C) Line 22 migrated time section showing interpreted seismic sequences. The structural interpretation has been simplified. See text for discussion. (D) Line 1 migrated time section showing interpreted seismic sequences in the Yaquina Basin. The structural interpretation has been greatly simplified. Note the BSR (bottom-simulating reflector), which represents the base of a gas-hydrate layer. See text for discussion. (E) Line 8 migrated time section showing interpreted seismic sequences in the Yaquina Basin. The structural interpretation has been greatly simplified. See text for discussion.
