Prepared by the
OCEAN DRILLING PROGRAM
TEXAS A&M UNIVERSITY

Sondra K. Stewart
Editor

in cooperation with the
NATIONAL SCIENCE FOUNDATION
and
JOINT OCEANOGRAPHIC INSTITUTIONS, INC.

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Department of Energy, Mines and Resources (Canada)

Deutsche Forschungsgemeinschaft (Federal Republic of Germany)

European Science Foundation Consortium for the Ocean Drilling Program (Belgium, Denmark, Finland, Iceland, Italy, Greece, the Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey)

Institut Français de Recherche pour l'Exploitation de la Mer (France)

National Science Foundation (United States)

Natural Environment Research Council (United Kingdom)

University of Tokyo, Ocean Research Institute (Japan)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

It is recommended that reference to the whole or to part of this volume be made in one of the following forms, as appropriate:

Suess, E., von Huene, R., et al., 1990. *Proc. ODP, Sci. Results*, 112: College Station, TX (Ocean Drilling Program).

Martini, E., 1990. Tertiary and Quaternary silicoflagellates, actiniscidians, and ebridians from the eastern Pacific off Peru (Leg 112). In Suess, E., von Huene, R., et al., 1990. *Proc. ODP, Sci. Results*, 112: College Station, TX (Ocean Drilling Program), 157-174.

Effective Publication Dates of ODP *Proceedings*

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 120 (*Initial Reports*): December 1989

Volume 121 (*Initial Reports*): December 1989

Volume 122 (*Initial Reports*): January 1990

Volume 108 (*Scientific Results*): December 1989

Volume 111 (*Scientific Results*): December 1989

Volume 107 (*Scientific Results*): February 1990

Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77845-9547. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

The paper used in this publication meets the minimum requirements of American National Standard for Information Sciences—Permanence of Paper for Printed Library Materials, ANSI Z39.48-1984[∞]™

Foreword

By the National Science Foundation

The scientists of the Ocean Drilling Program (ODP) have embarked on what could prove to be one of the most important earth science initiatives of the decade—an initiative rivaling in scope and impact the exploration of the frontiers of outer space. The program explores our planet's last frontier—the Earth's structure and history as it is revealed beneath the oceans. The scope of the program's scientific goals excites the imagination, challenges the intellect, and enhances the spirit of cooperation among peoples in countries around the world.

Between 1872 and 1876, HMS *Challenger* undertook the world's first major oceanographic expedition. That expedition greatly expanded man's knowledge of the world's oceans and revolutionized our ideas about planet Earth. From 1968 to 1983, another ship named *Challenger* logged more than 375,000 miles on 96 voyages across every ocean for the Deep Sea Drilling Project (DSDP), operated by Scripps Institution of Oceanography. Among the project's many remarkable discoveries were the confirmation of seafloor spreading and the establishment of the relative youth of the seafloor, thus verifying the dynamic and changing nature of the Earth's crust.

Today, the Ocean Drilling Program, which began in 1983, brings new resources to bear on scientific ocean drilling. A new drillship is in operation—the *JOIDES Resolution*—one of the world's most modern and best equipped drillships with enhanced capability for drilling and coring in polar areas and rough weather, expanded laboratory space, facilities for more scientists, and a major drill-hole logging program. The name of the ship was derived from the international scientific partnership that directs the program—the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES)—and from the flagship of Captain Cook's second voyage to the Pacific Ocean in the late 18th century. Texas A&M University is responsible for science operations in the program, and Lamont-Doherty Geological Observatory is responsible for the logging program.

The Ocean Drilling Program truly has international participation. In 1975, the International Phase of Ocean Drilling began with member nations—the U.S.A., U.S.S.R., the Federal Republic of Germany, Japan, the United Kingdom, and France—all providing funds and scientific guidance for the project. Today, ODP partners include the U.S.A., the Canada/Australia Consortium for the Ocean Drilling Program, France, the Federal Republic of Germany, Japan, the United Kingdom, and the European Science Foundation, which represents Sweden, Finland, Norway, Iceland, Denmark, Belgium, the Netherlands,

Spain, Switzerland, Italy, Greece, and Turkey. The National Science Foundation, with funds contributed by the United States and international partners, supports the scientific operations and planning for the ODP through a contract with Joint Oceanographic Institutions, Inc. (JOI).

The information gained by the program leads to a better understanding of the Earth and its dynamic processes. Drilled sediment cores and logs reveal clues to past climatic history and tie into parallel studies of paleoclimates from glacial ice cores drilled on the continents. Understanding these sediment cores will enable scientists to complete the map of major geologically active regions of the Earth, and to identify processes that lead to dynamic change such as earthquakes, volcanic eruptions, and mountain and continental growth. We are far from being able to predict such changes accurately now; but with the new tools and understanding, the accuracy of such predictions can be improved. This better understanding of the Earth's system(s) will allow us to identify regions of potential mineral and energy resource development, an issue of worldwide human interest. The Ocean Drilling Program is not in itself aimed at finding resources, but the knowledge of the Earth's processes that is gained through such a basic research program will inevitably provide pieces of information required for such resource discovery and exploitation.

The program is fully under way in its aim to further the understanding of the Earth's dynamic systems. People of our planet will benefit directly and indirectly from this research in both their daily living and work activities. This multinational endeavor will perhaps foster other cooperative efforts in science or among societies. The Ocean Drilling Program has distinguished ancestors in the original *Resolution* and *Challenger* expeditions and the Deep Sea Drilling Project. The National Science Foundation is proud to be playing a leading role in this program, and we are looking forward to significant and innovative science for many years to come.

Erich Bloch
Director
National Science Foundation

Washington, D.C.

Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents results from the Ocean Drilling Program (ODP), where scientists use a specially equipped ocean drilling ship to sample and measure the properties of the submerged part of the Earth's crust. These data are then synthesized with other information to yield new insights into earth processes.

These results address the scientific goals of the program, which include providing a global description of geological and geophysical structures and materials, studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations, and studying passive and active continental margins. In addition, the ODP data support the study of sea-level and ocean-circulation changes, the effects of the Earth's orbital variations on climate, and the study of processes and mechanisms of evolution from the biological records in the cores which are recovered from drilling.

The Ocean Drilling Program is a partnership of scientists and governments. Overall scientific policy and management guidance is provided by Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES), which consists of committees and panels made up of representatives of the participating institutions and other scientific and engineering experts. The JOIDES Executive Committee (EXCOM) provides general oversight; the JOIDES Planning Committee (PCOM) is the focal point for all scientific planning for the ODP and is key to the scientific success of the program.

The PCOM has a network of panels and working groups which screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical survey data and other safety and siting information. PCOM uses the recommendations of these panels and committees to select drilling targets, to specify the major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists. The science operator, Texas A&M University, in turn is responsible for planning the detailed ship's operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with PCOM and the cognizant panels.

Many of the scientific goals can be met only with new technology. Thus the program has identified engineering goals, which include the ability to start a hole and to core on bare rock at mid-ocean ridge sites, to drill in high-temperature and corrosive regions typical of hydrothermal areas, and to core in high latitudes with minimum interference from high seas and sea ice. To meet these needs, the program operates a specially equipped drillship, the *JOIDES Resolution*, which contains laboratories and equipment that are state-of-the-art, and carries a major new logging program.

The ship, registered as SEDCO/BP 471 after her owners and her length in feet (144 meters), is 70 feet (21 meters) wide, and has a displacement of 16,595 long tons. Her derrick towers 200 feet (61 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails

with a scientific and technical crew of 50 and a ship's crew of 65.

Logging is a major part of the overall operation. The program provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a borehole televiewer is available for imaging the well-bore wall, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the well bore, and a vertical seismic profiler records reflectors from below the total depth of the hole.

Texas A&M University serves as science operator for the Ocean Drilling Program. In this capacity, they operate and staff the drillship to collect cores from JOIDES-designated sites from around the world. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and by providing logistical and technical support for shipboard scientific teams. Onshore, Texas A&M manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of the scientific results. Lamont-Doherty Geological Observatory (LDGO) of Columbia University manages the program's logging operations, which include processing the data and provision of assistance to scientists in data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDGO. Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at three sites: ODP Pacific and Indian Ocean cores at Texas A&M University, ODP and DSDP Atlantic and Antarctic cores at Lamont-Doherty Geological Observatory, and DSDP Pacific and Indian Ocean cores at Scripps Institution of Oceanography.

International oversight and coordination are provided by the ODP Council, a governmental consultative body of partner country representatives, chaired by the United States, which periodically reviews the general progress of the program and discusses financial plans and other management issues. Joint Oceanographic Institutions, Inc., a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor and manages the ODP. JOI is responsible for seeing that the scientific objectives and plans are translated into scientific operations consistent with JOIDES recommendations and budgetary constraints.

Scientific achievements of the ODP already include new data on early seafloor spreading and how continents separate and their margins evolve. We have new insight into glacial cycles and the fluctuations of currents throughout geological time. Technical achievements include the first bare-rock coring, and logging data more accurate and complete than ever before. JOI is pleased to have played a facilitating role in the Ocean Drilling Program.

D. James Baker
President
Joint Oceanographic Institutions, Inc.

Washington, D.C.

Preface

The *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* contain specialty papers presenting the results of up to one and one-half years of research in various aspects of scientific ocean drilling. I acknowledge with thanks the authors of the papers published in this volume, who thereby have enabled future investigators to gain ready access to the results of their research.

Each of the papers submitted to a *Scientific Results* volume undergoes rigorous peer review by at least two specialists in the author's research field. A paper typically goes through one or more revision cycles before being accepted for publication. Our goal is to maintain a peer-review system comparable to those of the most highly regarded journals in the geological sciences.

The Editorial Review Board for a *Scientific Results* volume is responsible for obtaining peer reviews of papers submitted to the volume. This board usually is made up of the two co-chief scientists for the cruise, the ODP staff scientist for the cruise, and one external specialist who is familiar with the geology of the area investigated. In addition, the ODP staff editor assigned to the volume helps with any manuscripts that require special attention, such as those by authors who need assistance with English expression.

Scientific Results volumes may also contain short reports consisting of good data that are not ready for final interpretation. Papers in this category are segregated in a section in the back of the volume called Data Reports. Although no interpretation is permitted, these papers ordinarily contain a section on methodology or procedures. Data Report papers are read carefully by at least one specialist to make sure they are well organized, comprehensive, and discuss the techniques thoroughly. A paper that has undergone regular peer review is not eligible for later consideration as a Data Report.

In acknowledgment of the contributions made by this volume's Editorial Review Board, names of the individual Board members are listed on the title page. Reviewers of manuscripts for this volume, whose efforts are so essential to the success of the publication, are listed in the front portion of the book, without attribution to a particular manuscript.

On behalf of the Ocean Drilling Program, I extend sincere appreciation to members of the Editorial Review Boards and to the reviewers for giving so generously of their time and efforts in ensuring that only papers of high scientific quality are published in the *Proceedings*.

TABLE OF CONTENTS

VOLUME 112-SCIENTIFIC RESULTS

SECTION 1: SEDIMENTOLOGY

1. VEIN STRUCTURES OF THE PERU MARGIN, LEG 112 3
N. Lindsley-Griffin, A. Kemp, and J. F. Swartz
2. VARIATIONS IN STRUCTURAL STYLE WITHIN PERUVIAN FOREARC SEDIMENTS 17
A.E.S. Kemp and N. Lindsley-Griffin
3. FLUID FLOW IN "VEIN STRUCTURES" IN PERU FOREARC BASINS: EVIDENCE FROM
BACK-SCATTERED ELECTRON MICROSCOPE STUDIES 33
A.E.S. Kemp
4. SEDIMENTARY FABRICS AND VARIATION IN LAMINATION STYLE IN PERU
CONTINENTAL MARGIN UPWELLING SEDIMENTS 43
A.E.S. Kemp
5. CLAY MINERALOGY OF CENOZOIC SEDIMENTS FROM THE PERUVIAN CONTINENTAL
MARGIN: LEG 112 59
T. Clayton and A.E.S. Kemp
6. AN IMPROVED IMPREGNATION TECHNIQUE FOR STUDYING STRUCTURE OF
UNLITHIFIED COHESIVE SEDIMENTS 87
J. F. Swartz and N. Lindsley-Griffin

SECTION 2: DIAGENESIS

7. CARBONATE CEMENTATION OF GRANULAR AND FRACTURE POROSITY:
IMPLICATIONS FOR THE CENOZOIC HYDROLOGIC DEVELOPMENT OF THE PERU
CONTINENTAL MARGIN 95
T. M. Thornburg and E. Suess
8. PHOSPHATIC SEDIMENTS AND ROCKS RECOVERED FROM THE PERU MARGIN
DURING ODP LEG 112 111
R. E. Garrison and M. Kastner
9. AN INTEGRATED BIOCHEMICAL, GEOCHEMICAL, AND SEDIMENTOLOGICAL STUDY OF
ORGANIC DIAGENESIS IN SEDIMENTS FROM LEG 112 135
R. L. Patience, C. J. Clayton, A. T. Kearsley, S. J. Rowland, A. N. Bishop, A.W.G. Rees,
K. G. Bibby, and A. C. Hopper

SECTION 3: BIOSTRATIGRAPHY/PALEONTOLOGY

10. TERTIARY AND QUATERNARY SILICOFAGELLATES, ACTINISCIDIANS, AND EBRIDIANS
FROM THE EASTERN PACIFIC OFF PERU (LEG 112) 157
E. Martini
11. CLUSTERS OF SPONGE SPICULES FROM QUATERNARY SEDIMENTS AT SITES 685
AND 688 OFF PERU 175
E. Martini and S. Locker
12. RADIOLARIAN BIOSTRATIGRAPHY FROM LEG 112 ON THE PERU MARGIN 181
P. De Wever, J.-P. Caulet, and J. Bourgois

13. THE BALLENA AND DELFIN WELLS OFF CENTRAL PERU: REVISED AGES	209
H. Schrader and J. C. Castaneda	
14. TERTIARY AND QUATERNARY CALCAREOUS NANNOPLANKTON BIOSTRATIGRAPHY OFF PERU (ODP LEG 112)	217
E. Martini	
15. EOCENE THROUGH PLEISTOCENE PLANKTONIC FORAMINIFERS OFF PERU, LEG 112—BIOSTRATIGRAPHY AND PALEOCEANOGRAPHY	239
M. Ibaraki	
16. BENTHIC FORAMINIFERAL STRATIGRAPHY AND PALEOENVIRONMENTS OFF PERU, LEG 112	263
J. M. Resig	
17. LATE NEOGENE TO PLEISTOCENE PALYNOLOGICAL FACIES OF THE PERUVIAN CONTINENTAL MARGIN UPWELLING, LEG 112	297
A. J. Powell, J. D. Dodge, and J. Lewis	
18. QUATERNARY DINOFLAGELLATE CYSTS FROM THE UPWELLING SYSTEM OFFSHORE PERU, HOLE 686B, ODP LEG 112	323
J. Lewis, J. D. Dodge, and A. J. Powell	
19. A LOWER EOCENE SHELL BED AND SOME QUATERNARY MOLLUSKS FROM ODP LEG 112 OFF PERU	329
H. Hagn and E. Martini	
20. SHELL HORIZONS IN CENOZOIC UPWELLING-FACIES SEDIMENTS OFF PERU: DISTRIBUTION AND MOLLUSK FAUNA IN CORES FROM LEG 112	335
R. Schneider and G. Wefer	

SECTION 4: PALEOCEANOGRAPHY

21. STRATIGRAPHY AND SEDIMENTATION RATES FROM OXYGEN ISOTOPE COMPOSITION, ORGANIC CARBON CONTENT, AND GRAIN-SIZE DISTRIBUTION AT THE PERU UPWELLING REGION: HOLES 680B AND 686B	355
G. Wefer, P. Heinze, and E. Suess	
22. UPWELLING OFF PERU DURING THE LAST 430,000 YR AND ITS RELATIONSHIP TO THE BOTTOM-WATER ENVIRONMENT, AS DEDUCED FROM COARSE GRAIN-SIZE DISTRIBUTIONS AND ANALYSES OF BENTHIC FORAMINIFERS AT HOLES 679D, 680B, AND 681B, LEG 112	369
H. Oberhansli, P. Heinze, L. Diester-Haass, and G. Wefer	
23. SPATIAL AND TEMPORAL VARIATION OF PERUVIAN COASTAL UPWELLING DURING THE LATEST QUATERNARY	391
H. Schrader and R. Sorknes	
24. CADMIUM/CALCIUM RATIOS IN BENTHIC FORAMINIFERS RECOVERED DURING LEG 112	407
T. D. Jickells, B. M. Funnell, and K. A. Young	

SECTION 5: GEOCHEMISTRY

25. DIAGENESIS AND INTERSTITIAL-WATER CHEMISTRY AT THE PERUVIAN CONTINENTAL MARGIN—MAJOR CONSTITUENTS AND STRONTIUM ISOTOPES	413
M. Kastner, H. Elderfield, J. B. Martin, E. Suess, K. A. Kvenvolden, and R. E. Garrison	
26. ORGANIC CARBON, REDUCED SULFUR, AND IRON RELATIONSHIPS IN SEDIMENTS OF THE PERU MARGIN, SITES 680 AND 688	441
K.-C. Emeis and J. W. Morse	

27. SULFUR GEOCHEMISTRY AT SITES 680 AND 686 ON THE PERU MARGIN	455
J.-R. Mossmann, A. C. Aplin, C. D. Curtis, and M. L. Coleman	
28. VOLCANIC ASH FROM LEG 112 OFF PERU	465
A. Pouclet, H. Cambray, J.-P. Cadet, J. Bourgois, and P. De Wever	
29. COMPOSITION OF SEDIMENTS AND PORE FLUIDS ON THE PERUVIAN CONTINENTAL MARGIN FROM GEOCHEMICAL AND GEOPHYSICAL WELL LOGS, SITE 679, LEG 112	481
R. N. Anderson and M. L. Greenberg	
30. GEOCHEMISTRY OF SEDIMENTS FROM THE PERU UPWELLING AREA: RESULTS FROM SITES 680, 682, 685, AND 688	491
M. T. von Breymann, K.-C. Emeis, and A. Camerlenghi	
31. HYDROCARBON GASES IN TERTIARY AND QUATERNARY SEDIMENTS OFFSHORE PERU—RESULTS AND COMPARISONS	505
K. A. Kvenvolden, T. J. Frank, and M. Golan-Bac	
32. GAS HYDRATES OF THE PERUVIAN OUTER CONTINENTAL MARGIN	517
K. A. Kvenvolden and M. Kastner	
33. CHARACTERIZATION OF SORBED VOLATILE HYDROCARBONS FROM THE PERU MARGIN, LEG 112, SITES 679, 680/681, 682, 684, AND 686/687	527
M. J. Whiticar and E. Suess	
34. MOLECULAR COMPOSITION OF SEDIMENTARY LIPIDS OFF THE PERU MARGIN, LEG 112 .	539
P. Farrimond, J. G. Poynter, and G. Eglinton	
35. A MOLECULAR STRATIGRAPHIC STUDY OF PERU MARGIN SEDIMENTS, HOLE 686B, LEG 112	547
P. Farrimond, J. G. Poynter, and G. Eglinton	
36. AMINO ACIDS AND CARBOHYDRATES IN SEDIMENTS AND INTERSTITIAL WATERS FROM SITE 681, LEG 112, PERU CONTINENTAL MARGIN	555
R. Seifert, K.-C. Emeis, W. Michaelis, and E. T. Degens	
37. CAROTENOID DIAGENESIS IN PLEISTOCENE TO MIOCENE SEDIMENTS FROM THE PERU MARGIN	567
D. J. Repeta	
38. ORGANIC MATTER IN PERU UPWELLING SEDIMENTS—ANALYSIS BY PYROLYSIS, PYROLYSIS-GAS CHROMATOGRAPHY, AND PYROLYSIS-GAS CHROMATOGRAPHY MASS SPECTROMETRY	573
J. K. Whelan, Z. Kanyo, M. Tarafa, and M. A. McCaffrey	
39. ACCUMULATION RATES AND COMPOSITION OF ORGANIC MATTER IN LATE CENOZOIC SEDIMENTS UNDERLYING THE ACTIVE UPWELLING AREA OFF PERU	591
H. L. ten Haven, R. Littke, J. Rullkötter, R. Stein, and D. H. Welte	
40. BACTERIAL BIOMASS AND ACTIVITY PROFILES WITHIN DEEP SEDIMENT LAYERS	607
B. A. Cragg, R. J. Parkes, J. C. Fry, R. A. Hebert, J.W.T. Wimpenny, and J. M. Getliff	
 SECTION 6: PHYSICAL PROPERTIES	
41. CONTROLS ON PHYSICAL PROPERTIES OF PERU CONTINENTAL MARGIN SEDIMENTS AND THEIR RELATIONSHIP TO DEFORMATION STYLES	623
P. R. Hill and J. C. Marsters	
42. HYDRAULIC CONDUCTIVITY OF DIATOMACEOUS SEDIMENT FROM THE PERU CONTINENTAL MARGIN OBTAINED DURING ODP LEG 112	633
J. C. Marsters and H. A. Christian	

43. CONSOLIDATION, TRIAXIAL SHEAR-STRENGTH, AND INDEX-PROPERTY CHARACTERISTICS OF ORGANIC-RICH SEDIMENT FROM THE PERU CONTINENTAL MARGIN: RESULTS FROM LEG 112	639
H. J. Lee, R. E. Kayen, and W. G. McArthur	
44. HEAT-FLOW STUDIES IN THE PERU TRENCH SUBDUCTION ZONE	653
M. Yamano and S. Uyeda	
45. MODELING OF PORE PRESSURE, CENTRAL PERU MARGIN	663
Y. Shi, C.-Y. Wang, and R. von Huene	

SECTION 7: DATA REPORTS

46. RARE MIDDLE MIOCENE TO HOLOCENE PLANKTONIC FORAMINIFERAL REMAINS WITH SPECIAL EMPHASIS ON <i>GLOBOROTALIA</i> IN SEDIMENTS OF THE PERU CONTINENTAL SLOPE: SITES 683, 684, 686, 687, AND 688	673
G. Glaçon, P. De Wever, and J. Bourgois	
47. MAGNETIC SUSCEPTIBILITY MEASUREMENTS OF LEG 112 CORES	677
D. L. Merrill, T. Ohnstad, and R. McCabe	
48. GEOCHEMICAL DATA REPORT FOR PERU MARGIN SEDIMENTS FROM SITES 680, 682, 685, AND 688	683
K.-C. Emeis, P. N. Boothe, B. J. Katz, J. W. Morse, B. J. Presley, and M. T. von Breymann	

SECTION 8: POLICY

JOIDES ADVISORY GROUPS	695
SAMPLE-DISTRIBUTION POLICY	701

SECTION 9: INDEX
