PROCEEDINGS OF THE OCEAN DRILLING PROGRAM

VOLUME 119
INITIAL REPORTS

KERGUELEN PLATEAU–PRYDZ BAY

Covering Leg 119 of the cruises of the Drilling Vessel *JOIDES* Resolution,
Port Louis, Mauritius, to Fremantle, Australia, Sites 736 – 746,
14 December 1987 – 20 February 1988

John Barron, Birger Larsen, Jack Baldauf, Chantal Alibert,
Steve Berkowitz, Jean-Pierre Caulet, Steven Chambers, Alan Cooper, Ray Cranston,
Wolfgang Dorn, Werner Ehrmann, Rick Fox, Greta Fryxell, Michael Hambrey, Brian Huber,
Christopher Jenkins, Sung-Ho Kang, Barbara Keating, Klaus Mehl, Il Noh, Gilles Ollier,
Alan Pittenger, Hideo Sakai, Claudia Schroder, Anders Solheim, Dean Stockwell,
Hans Thierstein, Bruce Tocher, Brian Turner, and Wuchang Wei
Participating Scientists

Jack Baldauf
Shipboard Staff Scientist

Prepared by the
OCEAN DRILLING PROGRAM
Texas A&M University

Carol Hare and Elsa Kapitan Mazzullo
Volume Editors

in cooperation with the
NATIONAL SCIENCE FOUNDATION
and
JOINT OCEANOGRAPHIC INSTITUTIONS, INC.

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Department of Energy, Mines and Resources (Canada)

Deutsche Forschungsgemeinschaft (Federal Republic of Germany)

European Science Foundation Consortium for Ocean Drilling (ECOD), Belgium, Denmark, Finland, Iceland, Italy, Greece, the Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey

Institut Français de Recherche pour l'Exploitation de la Mer (France)

National Science Foundation (United States)

Natural Environment Research Council (United Kingdom)

University of Tokyo, Ocean Research Institute (Japan)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

It is recommended that reference to the whole or to part of this volume be made in one of the following forms, as appropriate:

Barron, J., Larsen, B., et al., 1989. *Proc. ODP, Init. Repts.*, 119: College Station, TX (Ocean Drilling Program).

Biggs, D. C., Berkowitz, S. P., Altabet, M. A., Bidigare, R. R., DeMaster, D. J., Macko, S.A., Ondrusek, M. E., and Noh, Il, 1989. A cooperative study of upper ocean particulate fluxes. *In* Barron, J., Larsen, B., et al., *Proc. ODP, Init. Repts.*, 119: College Station, TX (Ocean Drilling Program) – .

Shipboard Scientific Party, 1989. Site 746. *In* Barron, J., Larsen, B., et al., *Proc. ODP, Init. Repts.*, 119: College Station, TX (Ocean Drilling Program), – .

Effective Publication Dates of ODP *Proceedings*

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 115 (*Initial Reports*): November 1988
Volume 116 (*Initial Reports*): January 1989
Volume 117 (*Initial Reports*): May 1989
Volume 118 (*Initial Reports*): April 1989
Volumes 101/102 (*Scientific Results*): December 1988
Volume 103 (*Scientific Results*): December 1988

Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77840. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

Printed August 1989

ISSN 0884-5883

Foreword

By the National Science Foundation

The scientists of the Ocean Drilling Program (ODP) have embarked on what could prove to be one of the most important earth science initiatives of the decade—an initiative rivaling in scope and impact the exploration of the frontiers of outer space. The program explores our planet's last frontier—the Earth's structure and history as it is revealed beneath the oceans. The scope of the program's scientific goals excites the imagination, challenges the intellect, and enhances the spirit of cooperation among peoples in countries around the world.

Between 1872 and 1876, HMS *Challenger* undertook the world's first major oceanographic expedition. That expedition greatly expanded man's knowledge of the world's oceans and revolutionized our ideas about planet Earth. From 1968 to 1983, another ship named *Challenger* logged more than 375,000 miles on 96 voyages across every ocean for the Deep Sea Drilling Project (DSDP), operated by Scripps Institution of Oceanography. Among the project's many remarkable discoveries were the confirmation of seafloor spreading and the establishment of the relative youth of the seafloor, thus verifying the dynamic and changing nature of the Earth's crust.

Today, the Ocean Drilling Program, which began in 1983, brings new resources to bear on scientific ocean drilling. A new drillship is in operation—the *JOIDES Resolution*—one of the world's most modern and best equipped drillships with enhanced capability for drilling and coring in polar areas and rough weather, expanded laboratory space, facilities for more scientists, and a major drill-hole logging program. The name of the ship was derived from the international scientific partnership that directs the program—the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES)—and from the flagship of Captain Cook's second voyage to the Pacific Ocean in the late 18th century. Texas A&M University is responsible for science operations in the program, and Lamont-Doherty Geological Observatory is responsible for the logging program.

The Ocean Drilling Program truly has international participation. In 1975, the International Phase of Ocean Drilling began with member nations—the U.S.A., U.S.S.R., the Federal Republic of Germany, Japan, the United Kingdom, and France—all providing funds and scientific guidance for the project. Today, ODP partners include the U.S.A., Canada, France, the Federal Republic of Germany, Japan, the United Kingdom, and the European Science Foundation, which represents Sweden, Finland, Norway, Iceland, Denmark, Belgium, the Netherlands, Spain, Switzerland, Italy, Greece, and Turkey. The National Science Foundation, with funds contributed by the United States and international partners, supports the scientific operations and planning for the ODP through a contract with Joint Oceanographic Institutions, Inc. (JOI).

The information gained by the program leads to a better understanding of the Earth and its dynamic processes. Drilled sediment cores and logs reveal clues to past climatic history and tie into parallel studies of paleoclimates from glacial ice cores drilled on the continents. Understanding these sediment cores will enable scientists to complete the map of major geologically active regions of the Earth, and to identify processes that lead to dynamic change such as earthquakes, volcanic eruptions, and mountain and continental growth. We are far from being able to predict such changes accurately now; but with the new tools and understanding, the accuracy of such predictions can be improved. This better understanding of the Earth's system(s) will allow us to identify regions of potential mineral and energy resource development, an issue of worldwide human interest. The Ocean Drilling Program is not in itself aimed at finding resources, but the knowledge of the Earth's processes that is gained through such a basic research program will inevitably provide pieces of information required for such resource discovery and exploitation.

The program is fully under way in its aim to further the understanding of the Earth's dynamic systems. People of our planet will benefit directly and indirectly from this research in both their daily living and work activities. This multinational endeavor will perhaps foster other cooperative efforts in science or among societies. The Ocean Drilling Program has distinguished ancestors in the original *Resolution* and *Challenger* expeditions and the Deep Sea Drilling Project. The National Science Foundation is proud to be playing a leading role in this program, and we are looking forward to significant and innovative science for many years to come.

Erich Bloch
Director
National Science Foundation

Washington, D.C.

Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents results from the Ocean Drilling Program (ODP), where scientists use a specially equipped ocean drilling ship to sample and measure the properties of the submerged part of the Earth's crust. These data are then synthesized with other information to yield new insights into earth processes.

These results address the scientific goals of the program, which include providing a global description of geological and geophysical structures and materials, studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations, and studying passive and active continental margins. In addition, the ODP data support the study of sea-level and ocean-circulation changes, the effects of the Earth's orbital variations on climate, and the study of processes and mechanisms of evolution from the biological records in the cores which are recovered from drilling.

The Ocean Drilling Program is a partnership of scientists and governments. Overall scientific policy and management guidance is provided by Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES), which consists of committees and panels made up of representatives of the participating institutions and other scientific and engineering experts. The JOIDES Executive Committee (EXCOM) provides general oversight; the JOIDES Planning Committee (PCOM) is the focal point for all scientific planning for the ODP and is key to the scientific success of the program.

The PCOM has a network of panels and working groups which screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical survey data and other safety and siting information. PCOM uses the recommendations of these panels and committees to select drilling targets, to specify the major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists. The science operator, Texas A&M University, in turn is responsible for planning the detailed ship's operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with PCOM and the cognizant panels.

Many of the scientific goals can be met only with new technology. Thus the program has identified engineering goals, which include the ability to start a hole and to core on bare rock at mid-ocean ridge sites, to drill in high-temperature and corrosive regions typical of hydrothermal areas, and to core in high latitudes with minimum interference from high seas and sea ice. To meet these needs, the program operates a specially equipped drillship, the *JOIDES Resolution*, which contains laboratories and equipment that are state-of-the-art, and carries a major new logging program.

The ship, registered as SEDCO/BP 471 after her owners and her length in feet (144 meters), is 70 feet (21 meters) wide, and has a displacement of 16,595 long tons. Her derrick towers 200 feet (61 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails with a scientific and technical crew of 50 and a ship's crew of 65.

Logging is a major part of the overall operation. The program provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a borehole televiewer is available for imaging the well-bore wall, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the well bore, and a vertical seismic profiler records reflectors from below the total depth of the hole.

Texas A&M University serves as science operator for the Ocean Drilling Program. In this capacity, they operate and staff the drillship to collect cores from JOIDES-designated sites from around the world. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and by providing logistical and technical support for shipboard scientific teams. Onshore, Texas A&M manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of the scientific results. Lamont-Doherty Geological Observatory (LDGO) of Columbia University manages the program's logging operations, which include processing the data and provision of assistance to scientists in data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDGO. Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at three sites: ODP Pacific and Indian Ocean cores at Texas A&M University, ODP and DSDP Atlantic and Antarctic cores at Lamont-Doherty Geological Observatory, and DSDP Pacific and Indian Ocean cores at Scripps Institution of Oceanography.

International oversight and coordination are provided by the ODP Council, a governmental consultative body of partner country representatives, chaired by the United States, which periodically reviews the general progress of the program and discusses financial plans and other management issues. Joint Oceanographic Institutions, Inc., a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor and manages the ODP. JOI is responsible for seeing that the scientific objectives and plans are translated into scientific operations consistent with JOIDES recommendations and budgetary constraints.

Scientific achievements of the ODP already include new data on early seafloor spreading and how continents separate and their margins evolve. We have new insight into glacial cycles and the fluctuations of currents throughout geological time. Technical achievements include the first bare-rock coring, and logging data more accurate and complete than ever before. JOI is pleased to have played a facilitating role in the Ocean Drilling Program.

OCEAN DRILLING PROGRAM

MEMBER ORGANIZATIONS OF THE JOINT OCEANOGRAPHIC INSTITUTIONS FOR DEEP EARTH SAMPLING (JOIDES):[1]

University of California at San Diego, Scripps Institution of Oceanography

Columbia University, Lamont-Doherty Geological Observatory

University of Hawaii, Hawaii Institute of Geophysics

University of Miami, Rosenstiel School of Marine and Atmospheric Science

Oregon State University, College of Oceanography

University of Rhode Island, Graduate School of Oceanography

Texas A&M University, College of Geosciences

University of Texas at Austin, Institute for Geophysics

University of Washington, College of Ocean and Fishery Sciences

Woods Hole Oceanographic Institution

Department of Energy, Mines and Resources (Canada)

European Science Foundation Consortium for Ocean Drilling (ECOD), Belgium, Denmark, Finland, Iceland, Italy, Greece, the Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey

Federal Republic of Germany, Bundesanstalt für Geowissenschaften und Rohstoffe

France, Institut Français de Recherche pour l'Exploitation de la Mer

Japan, University of Tokyo, Ocean Research Institute

United Kingdom, Natural Environment Research Council

[1] Includes member organizations during time of cruise.

PRIME CONTRACTOR

Joint Oceanographic Institutions, Inc.
Washington, D.C.

Thomas E. Pyle
Director, Ocean Drilling Programs

OPERATING INSTITUTION

College of Geosciences
Texas A&M University
College Station, Texas

Melvin Friedman, Principal Investigator

OCEAN DRILLING PROGRAM

Philip D. Rabinowitz
Director

Geology Department
Stanford University
Stanford, California 94305

Alan K. Cooper
Geophysicist
Pacific Arctic Branch of Marine Geology
U.S. Geological Survey
345 Middlefield Road
Menlo Park, California 94025

Ray Cranston
Sedimentologist
Atlantic Geoscience Centre
Bedford Institute of Oceanography
Dartmouth, Nova Scotia B2Y 4A2
Canada

* Aboard the ice-support vessel *Maersk Master.*

Wolfgang Dorn
Sedimentologist
Hawaii Institute
of Geophysics
2525 Correa Road
Honolulu, Hawaii 96822
(currently at:
Geologisches-Paläontologisches Institut
Universität Kiel
Olshausenstrasse 40
D-2300 Kiel
Federal Republic of Germany)

Werner Ehrmann
Sedimentologist
Alfred Wegener Institute for Polar and Marine Research
Postfach 120161
D-2850 Bremerhaven
Federal Republic of Germany

Rick Fox
Organic Geochemist
Department of Oceanography
Texas A&M University
College Station, Texas 77843

Greta Fryxell
Phytoplankton Specialist
Department of Oceanography
Texas A&M University
College Station, Texas 77843

Michael Hambrey
Sedimentologist
Department of Earth Sciences
Cambridge University
Downing Street
Cambridge CB2 3EQ
United Kingdom

Brian T. Huber
Paleontologist (foraminifers)
Byrd Polar Research Center
Ohio State University
125 South Oval Mall
Columbus, Ohio 43210
(current address:
National Museum of Natural History
Smithsonian Institution
Washington, DC 20560)

Christopher J. Jenkins
Sedimentologist
Ocean Sciences Institute
University of Sydney
Sydney, New South Wales 2006
Australia

Sung-Ho Kang*
Phytoplankton Specialist
Department of Oceanography
Texas A&M University
College Station, Texas 77843

Barbara H. Keating
Paleomagnetist
Hawaii Institute of Geophysics
University of Hawaii
2525 Correa Road
Honolulu, Hawaii 96822

Klaus Mehl
Petrologist
Institut für Mineralogie
Ruhr-Universität Bochum
Postfach 102148

Federal Republic of Germany

Il Noh*
Oceanographer
Department of Oceanography
Texas A&M University
College Station, Texas 77843

Gilles Ollier
LDGO Logging Scientist
Lamont-Doherty Geological Observatory
Columbia University
Palisades, New York 10964
(current address:
Centre Océanologique de Bretagne
IFREMER
BP 337
29273 Brest Cedex
France)

Alan Pittenger
Physical-Properties Specialist
Department of Oceanography
Texas A&M University
College Station, Texas 77843

Hideo Sakai
Paleomagnetist
Department of Earth Sciences
Toyama University
Gofuku 3190
Toyama City 930
Japan

Claudia J. Schroder
Paleontologist (foraminifers)
Centre for Marine Geology
Dalhousie University
Halifax, Nova Scotia B3H 3J5
Canada
(current address:
Site 13, Box 27
R. R. #4
Calgary T2M 404
Canada)

* Aboard the ice-support vessel *Maersk Master.*

Anders Solheim
Physical-Properties Specialist
Norwegian Polar Research Institute
P.O. Box 158
N-1330 Oslo Lufthavn
Norway

Dean A. Stockwell*
Phytoplankton Specialist
Marine Science Institute
University of Texas
Port Aransas, Texas 78373

Hans R. Thierstein
Paleontologist (nannofossils)
Geologisches Institut
Eidgenossische Technische Hochschule
Sonnegstrasse 5
CH-8092 Zurich
Switzerland

Bruce Tocher
Palynologist (pollen/dinoflagellates)
Department of Geological Sciences
Plymouth Polytechnic
Drake Circus
Plymouth, Devon PL4 8AA
United Kingdom

Brian Turner
Sedimentologist
Department of Geology
The University of Newcastle upon Tyne
Newcastle upon Tyne NEI 7RU
United Kingdom

Wuchang Wei

SECTION 4: POLICY

ACKNOWLEDGMENTS

The scientific party of Leg 119 of the Ocean Drilling Program expresses its thanks to all who have helped to make possible the work described in this volume.

We appreciate the efforts of Roland Schlich, Institut de Physique du Globe, Strasbourg, France, in compiling geophysical data, writing proposals, and arguing for drilling on the Kerguelen Plateau. Similarly, we thank Peter Barker of the British Antarctic Survey for assembling the initial Prydz Bay drilling proposal, for arguing strongly, along with Jim Kennett (University of California, Santa Barbara), for Prydz Bay drilling, and for providing advice to the Leg 119 participants. We acknowledge Carl Brenner and the staff of the JOIDES/ODP Site Survey Data Bank, Lamont-Doherty Geological Observatory, for supplying us with seismic, bathymetric, magnetic, and core data. We also are grateful to Howard Stagg and Dave Falvey of the Australian Bureau of Mineral Resources for providing digital tapes of the Prydz Bay seismic data and to Jon Childs of the U.S. Geological Survey, Menlo Park, California, for processing that seismic data in preparation for Leg 119. Yasuo Tamura of the Japan National Oil Company also graciously gave us multichannel seismic data from Prydz Bay.

We certainly appreciate the dedication and enthusiastic cooperation of Captain Gerard Kuster, his officers, and crew of the *JOIDES Resolution* (SEDCO BP/471), as well as Jack Tarbutton, drilling superintendent, and the drilling crew. Captain Peter Messmann and the hard-working crew of the *Maersk Master* (ice support vessel) were extremely responsive and effective in their efforts to keep ice away from the drillship and assisting us with our biological programs. Glen Foss, ODP operations superintendent, provided excellent coordination and liaison, and we appreciate his valuable technical advice. The ODP scientific technicians were thoroughly dedicated and professional in performing their duties, and we are grateful for their hospitality and good humor, which helped make life aboard the *JOIDES Resolution* more enjoyable.

The Australian personnel at Davis Antarctic Station (the radio operator, in particular) kept us well advised of ice conditions in Prydz Bay and supplied us with valuable information about Prydz Bay geology.

We thank the editors and illustrators of the Ocean Drilling Program for help in compiling this volume.
