Initial Reports
Volume 121: Chapter 12: Figure 41. Detailed correlation of the Holocene to Miocene-Pliocene APC-cored sequences of Holes 758A and 758B, based on the comparison of magnetic polarity, susceptibility, and occurrence of characteristic ash layers (lowercase letters) that were visually correlated between cores (see Table 11). Gaps determined by comparing susceptibility records are indicated by the values shown (see Table 12). The susceptibility of the core catchers was generally not measured; therefore, the susceptibility gaps shown graphically are generally larger than the actual core gap.
