

ERRATA

for

Volume 124 of the *Scientific Results of the Proceedings of the Ocean Drilling Program*

After Vol. 124 of the *Scientific Results of the ODP Proceedings* had been printed, several typographical errors were discovered that depict an incorrect symbol for the element thallium (Tl) in Chapter 19 by P. Spadea et al. The symbol for thallium was incorrectly given as "Ti" (actually the symbol for titanium) and should be corrected to "Tl" as follows:

1. Page 251: Abstract, paragraph 2, line 4.
2. Page 253: column 1, 8th line from bottom.
3. Page 257: column 1, 5th line from bottom; column 2, 3rd line from top.
4. Table 6 (on microfiche in back pocket): left column, 5th line from top.

Another typographical error was discovered on page 251: in column 1, last line (just above the footnotes), "220 meters" should be "1270 meters."

PROCEEDINGS OF THE OCEAN DRILLING PROGRAM

VOLUME 124 SCIENTIFIC RESULTS CELEBES AND SULU SEAS

Covering Leg 124 of the cruises of the Drilling Vessel *JOIDES Resolution*,
Singapore, Republic of Sing., to Manila, Philippines, Sites 767-771,
1 November 1988-4 January 1989

Prepared by the
OCEAN DRILLING PROGRAM
TEXAS A&M UNIVERSITY

William R. Winkler
Volume Editor

in cooperation with the
NATIONAL SCIENCE FOUNDATION
and
JOINT OCEANOGRAPHIC INSTITUTIONS, INC.

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Canada/Australia Consortium for the Ocean Drilling Program, Department of Energy, Mines and Resources (Canada) and Department of Primary Industries and Energy (Australia)

Deutsche Forschungsgemeinschaft (Federal Republic of Germany)

European Science Foundation Consortium for Ocean Drilling (Belgium, Denmark, Finland, Iceland, Italy, Greece, the Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey)

Institut Français de Recherche pour l'Exploitation de la Mer (France)

National Science Foundation (United States)

Natural Environment Research Council (United Kingdom)

University of Tokyo, Ocean Research Institute (Japan)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

It is recommended that reference to the whole or to part of this volume be made in one of the following forms, as appropriate:

Silver, E. A., Rangin, C., von Breymann, M. T., et al., 1991. *Proc. ODP, Sci. Results.*, 124: College Station, TX (Ocean Drilling Program).

Lewis, S. D., 1991. Geophysical setting of the Sulu and Celebes seas. *In* Silver, E. A., Rangin, C., von Breymann, M. T., et al., *Proc. ODP, Sci. Results.*, 124: College Station, TX (Ocean Drilling Program), 65–73.

Effective Publication Dates of ODP Proceedings

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 130 (*Initial Reports*): March 1991
Volume 131/132 (*Initial Reports*): June 1991
Volume 133 (*Initial Reports*): September 1991
Volume 117 (*Scientific Reports*): February 1991
Volume 118 (*Scientific Results*): July 1991
Volume 119 (*Scientific Results*): August 1991

Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77845-9547. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

Foreword

By the National Science Foundation

The scientists of the Ocean Drilling Program (ODP) have embarked on what could prove to be one of the most important earth science initiatives of the decade—an initiative rivaling in scope and impact the exploration of the frontiers of outer space. The program explores our planet's last frontier—the Earth's structure and history as it is revealed beneath the oceans. The scope of the program's scientific goals excites the imagination, challenges the intellect, and enhances the spirit of cooperation among peoples in countries around the world.

Between 1872 and 1876, HMS *Challenger* undertook the world's first major oceanographic expedition. That expedition greatly expanded man's knowledge of the world's oceans and revolutionized our ideas about planet Earth. From 1968 to 1983, another ship named *Challenger* logged more than 375,000 miles on 96 voyages across every ocean for the Deep Sea Drilling Project (DSDP), operated by Scripps Institution of Oceanography. Among the project's many remarkable discoveries were the confirmation of seafloor spreading and the establishment of the relative youth of the seafloor, thus verifying the dynamic and changing nature of the Earth's crust.

Today, the Ocean Drilling Program, which began in 1983, brings new resources to bear on scientific ocean drilling. A new drillship is in operation—the *JOIDES Resolution*—one of the world's most modern and best equipped drillships with enhanced capability for drilling and coring in polar areas and rough weather, expanded laboratory space, facilities for more scientists, and a major drill-hole logging program. The name of the ship was derived from the international scientific partnership that directs the program—the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES)—and from the flagship of Captain Cook's second voyage to the Pacific Ocean in the late 18th century. Texas A&M University is responsible for science operations in the program, and Lamont-Doherty Geological Observatory is responsible for the logging program.

The Ocean Drilling Program truly has international participation. In 1975, the International Phase of Ocean Drilling began with member nations—the U.S.A., U.S.S.R., Federal Republic of Germany, Japan, United Kingdom, and France—all providing funds and scientific guidance for the project. Today, ODP partners include the U.S.A., the Canada/Australia Consortium for the Ocean Drilling Program, France, the Federal Republic of Germany, Japan, the United Kingdom, and the European Science Foundation, which represents Sweden, Finland, Norway, Iceland, Denmark, Belgium, the Netherlands, Spain, Switzerland, Italy, Greece, and Turkey. The National Science Foundation,

with funds contributed by the United States and international partners, supports the scientific operations and planning for the ODP through a contract with Joint Oceanographic Institutions, Inc. (JOI).

The information gained by the program leads to a better understanding of the Earth and its dynamic processes. Drilled sediment cores and logs reveal clues to past climatic history and tie into parallel studies of paleoclimates from glacial ice cores drilled on the continents. Understanding these sediment cores will enable scientists to complete the map of major geologically active regions of the Earth, and to identify processes that lead to dynamic change such as earthquakes, volcanic eruptions, and mountain and continental growth. We are far from being able to predict such changes accurately now; but with the new tools and understanding, the accuracy of such predictions can be improved. This better understanding of the Earth's system(s) will allow us to identify regions of potential mineral and energy resource development, an issue of worldwide human interest. The Ocean Drilling Program is not in itself aimed at finding resources, but the knowledge of the Earth's processes that is gained through such a basic research program will inevitably provide pieces of information required for such resource discovery and exploitation.

The program is fully under way in its aim to further the understanding of the Earth's dynamic systems. People of our planet will benefit directly and indirectly from this research in both their daily living and work activities. This multinational endeavor will perhaps foster other cooperative efforts in science or among societies. The Ocean Drilling Program has distinguished ancestors in the original *Resolution* and *Challenger* expeditions and the Deep Sea Drilling Project. The National Science Foundation is proud to be playing a leading role in this program, and we are looking forward to significant and innovative science for many years to come.

Erich Bloch
Director
National Science Foundation

Washington, D.C.

Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents results from the Ocean Drilling Program (ODP), where scientists use a specially equipped ocean drilling ship to sample and measure the properties of the submerged part of the Earth's crust. These data are then synthesized with other information to yield new insights into earth processes.

These results address the scientific goals of the program, which include providing a global description of geological and geophysical structures and materials, studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations, and studying passive and active continental margins. In addition, the ODP data support the study of sea-level and ocean-circulation changes, the effects of the Earth's orbital variations on climate, and the study of processes and mechanisms of evolution from the biological records in the cores which are recovered from drilling.

The Ocean Drilling Program is a partnership of scientists and governments. Overall scientific policy and management guidance is provided by Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES), which consists of committees and panels made up of representatives of the participating institutions and other scientific and engineering experts. The JOIDES Executive Committee (EXCOM) provides general oversight; the JOIDES Planning Committee (PCOM) is the focal point for all scientific planning for the ODP and is key to the scientific success of the program.

The PCOM has a network of panels and working groups which screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical survey data and other safety and siting information. PCOM uses the recommendations of these panels and committees to select drilling targets, to specify the major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists. The science operator, Texas A&M University, in turn is responsible for planning the detailed ship's operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with PCOM and the cognizant panels.

Many of the scientific goals can be met only with new technology. Thus the program has identified engineering goals, which include the ability to start a hole and to core on bare rock at mid-ocean ridge sites, to drill in high-temperature and corrosive regions typical of hydrothermal areas, and to core in high latitudes with minimum interference from high seas and sea ice. To meet these needs, the program operates a specially equipped drillship, the *JOIDES Resolution*, which contains laboratories and equipment that are state-of-the-art, and carries a major new logging program.

The ship, registered as SEDCO/BP 471 after her owners and her length in feet (144 meters), is 70 feet (21 meters) wide, and has a displacement of 16,595 long tons. Her derrick towers 200 feet (61 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails with a scientific and technical crew of 50 and a ship's crew of 65.

Logging is a major part of the overall operation. The program provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a borehole televiewer is available for imaging the well-bore wall, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the well bore, and a vertical seismic profiler records reflectors from below the total depth of the hole.

Texas A&M University serves as science operator for the Ocean Drilling Program. In this capacity, they operate and staff the drillship to collect cores from JOIDES-designated sites from around the world. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and by providing logistical and technical support for shipboard scientific teams. Onshore, Texas A&M manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of the scientific results. Lamont-Doherty Geological Observatory (LDGO) of Columbia University manages the program's logging operations, which include processing the data and provision of assistance to scientists in data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDGO. Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at three sites: ODP Pacific and Indian Ocean cores at Texas A&M University, ODP and DSDP Atlantic and Antarctic cores at Lamont-Doherty Geological Observatory, and DSDP Pacific and Indian Ocean cores at Scripps Institution of Oceanography.

International oversight and coordination are provided by the ODP Council, a governmental consultative body of partner country representatives, chaired by the United States, which periodically reviews the general progress of the program and discusses financial plans and other management issues. Joint Oceanographic Institutions, Inc., a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor and manages the ODP. JOI is responsible for seeing that the scientific objectives and plans are translated into scientific operations consistent with JOIDES recommendations and budgetary constraints.

Scientific achievements of the ODP already include new data on early seafloor spreading and how continents separate and their margins evolve. We have new insight into glacial cycles and the fluctuations of currents throughout geological time. Technical achievements include the first bare-rock coring, and logging data more accurate and complete than ever before. JOI is pleased to have played a facilitating role in the Ocean Drilling Program.

D. James Baker
President
Joint Oceanographic Institutions, Inc.

Washington, D.C.

Preface

The *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* contain specialty papers presenting the results of up to one and one-half years of research in various aspects of scientific ocean drilling. I acknowledge with thanks the authors of the papers published in this volume, who thereby have enabled future investigators to gain ready access to the results of their research.

Each of the papers submitted to a *Scientific Results* volume undergoes rigorous peer review by at least two specialists in the author's research field. A paper typically goes through one or more revision cycles before being accepted for publication. Our goal is to maintain a peer-review system comparable to those of the most highly regarded journals in the geological sciences.

The Editorial Review Board for a *Scientific Results* volume is responsible for obtaining peer reviews of papers submitted to the volume. This board usually is made up of the two co-chief scientists for the cruise, the ODP staff scientist for the cruise, and one external specialist who is familiar with the geology of the area investigated. In addition, the ODP staff editor assigned to the volume helps with any manuscripts that require special attention, such as those by authors who need assistance with English expression.

Scientific Results volumes may also contain short reports consisting of good data that are not ready for final interpretation. Papers in this category are segregated in a section in the back of the volume called Data Reports. Although no interpretation is permitted, these papers ordinarily contain a section on methodology or procedures. Data Report papers are read carefully by at least one specialist to make sure they are well organized, comprehensive, and discuss the techniques thoroughly.

In acknowledgment of the contributions made by this volume's Editorial Review Board, names of the individual Board members are listed on the title page. Reviewers of manuscripts for this volume, whose efforts are so essential to the success of the publication, are listed in the front portion of the book, without attribution to a particular manuscript.

On behalf of the Ocean Drilling Program, I extend sincere appreciation to members of the Editorial Review Boards and to the reviewers for giving so generously of their time and efforts in ensuring that only papers of high scientific quality are published in the *Proceedings*.

TABLE OF CONTENTS

VOLUME 124—SCIENTIFIC RESULTS

SECTION 1: CRUISE SYNTHESIS

1. Leg 124 tectonic synthesis 3
E. A. Silver and C. Rangin
2. Biostratigraphic and magnetostratigraphic synthesis of the Celebes and Sulu seas, Leg 124 . . . 11
J.-P. Shyu, D. Merrill, V. Hsu, M. A. Kaminski, C. M. Müller, A. J. Nederbragt,
R. P. Scherer, and H. Shibuya

SECTION 2: REGIONAL AND GEOPHYSICAL STUDIES

3. Development of the Celebes Sea Basin in the context of western Pacific marginal basin history 39
E. A. Silver and C. Rangin
4. Neogene tectonic evolution of the Celebes-Sulu basins: new insights from Leg 124 drilling 51
C. Rangin and E. A. Silver
5. Geophysical setting of the Sulu and Celebes seas 65
S. D. Lewis
6. Geophysical properties of oceanic crust at Sites 768 and 770 75
R. D. Jarrard and C. Broglia
7. Electrical properties of basalts from Sites 768 and 770 91
R. D. Jarrard and R. Schaar
8. Results of borehole televiewer observations in the Celebes and Sulu seas 105
K. S. Kirchoff-Stein, E. A. Silver, D. Moos, C. A. Barton, and R. Jarrard

SECTION 3: PALEONTOLOGICAL AND PALEOCEANOGRAPHIC STUDIES

9. Biostratigraphy and geological evolution of the Sulu Sea and surrounding area 121
C. Müller
10. Calcareous nannofossil biostratigraphy of the Celebes and Sulu seas 133
J.-P. Shyu and C. M. Müller
11. Distribution and preservation of Cenozoic planktonic foraminifers from the Celebes and Sulu seas, Leg 124 159
A. J. Nederbragt
12. Biostratigraphy of Eocene to Oligocene deep-water agglutinated foraminifers in the red clays from Site 767, Celebes Sea 171
M. A. Kaminski and Z. Huang
13. Diagenesis and cementation of lower Miocene pyroclastic sequences in the Sulu Sea, Sites 768, 769, and 771 181
R. B. Smith

SECTION 4: GEOCHEMICAL STUDIES

14. Pore-water chemistry of the Sulu and Celebes Seas: extensive diagenetic reactions at Sites 767 and 768 203
M. T. von Breyman, P. K. Swart, G. W. Brass, and U. Berner
15. Organic sedimentation in Celebes and Sulu basins: type of organic matter and evaluation of organic carbon accumulation rates 217
P. Bertrand, U. Berner, and E. Lallier-Vergès

16. Light hydrocarbons in sediments of the Sulu Sea Basin (Site 768): genetic characterization by molecular and stable isotope composition	227
U. Berner and P. Bertrand	
17. Isotopic characterization of secondary carbonates from Sulu and Celebes Sea basalts: contrasting scenarios of basalt-seawater interaction	233
M. T. von Breymann and U. Berner	
18. Geochemical and optical investigations on degradation processes affecting organic matter in Celebes Basin sediments	239
E. Lallier-Vergès, P. Bertrand, A. Desprairies, and U. Berner	

SECTION 5: BASEMENT STUDIES

19. Petrology of basic igneous rocks from the floor of the Sulu Sea	251
P. Spadea, L. Beccaluva, L. Civetta, M. Coltorti, J. Dostal, F. Sajona, G. Serri, C. Vaccaro, and O. Zeda	
20. Petrology of igneous rocks from the Celebes Sea basement	271
G. Serri, P. Spadea, L. Beccaluva, L. Civetta, M. Coltorti, J. Dostal, F. Sajona, C. Vaccaro, and O. Zeda	
21. Geochemistry and petrogenesis of the volcanic rocks from Holes 768 and 769, Sulu Sea . . .	297
T. E. Smith, C. H. Huang, and F. G. Sajona	
22. Geochemistry and petrogenesis of basalts from Holes 767C, 770B, and 770C, Celebes Sea . .	311
T. E. Smith, C. H. Huang, and F. G. Sajona	
23. Geochemistry and isotopic dating of Cenozoic volcanic arc sequences around the Celebes and Sulu seas	321
H. Bellon and C. Rangin	
24. Age of the crust of the southeast Sulu Sea Basin based on magnetic anomalies and age determined at Site 768	339
H. A. Roeser	
25. Radiolarians of the Celebes Sea, Leg 124, Sites 767 and 770	345
R. P. Scherer	
26. Miocene radiolarians of the Sulu Sea, Leg 124	359
R. P. Scherer	
27. Palynological aspects of Site 767 in the Celebes Sea	369
W. A. (Sander) van der Kaars	
28. Carbonate sedimentation in the Sulu Sea linked to the onset of Northern Hemisphere glaciation, 2.4 Ma	375
B. K. Linsley	
29. Stable isotopic and geochemical record in the Sulu Sea during the last 750 k.y.: assessment of surface water variability and paleoproductivity changes	379
B. K. Linsley and M. T. von Breymann	

SECTION 6: SEDIMENTOLOGICAL STUDIES

30. Subsidence and sedimentation analysis of marginal basins: Celebes Sea and Sulu Sea, Leg 124, Sites 767 and 768	399
Z. Huang, F. M. Gradstein, and K. E. Loudon	
31. Inheritance and neof ormations in the sediments of the Celebes and Sulu basins (Leg 124) . . .	409
E. Nicot and A. Desprairies	
32. Significance of turbidites at Site 767 (Celebes Sea) and Site 768 (Sulu Sea)	431
C. Betzler, A. J. Nederbragt, and G. J. Nichols	
33. Site backtracking and the Eocene-Oligocene calcite compensation depth in the Celebes Sea . .	447
R. B. Smith, M. T. von Breymann, and Z. Huang	
34. Correlations of teph ras in Celebes and Sulu Sea basins: constraints on geodynamics	459
M. Pubellier, P. Spadea, A. Pouclet, R. Solidum, A. Desprairies, and H. Cambray	

35. Volcanic ash from Celebes and Sulu Sea basins off the Philippines (Leg 124): petrography and geochemistry	467
A. Pouclet, M. Pubellier, and P. Spadea	
36. Diagenetic evolution of Neogene volcanic ashes (Celebes and Sulu seas)	489
A. Desprairies, M. Rivière, and M. Pubellier	

SECTION 7: PHYSICAL PROPERTIES AND PALEOMAGNETISM

37. Index properties and compressional-wave velocity variations and correlations for Leg 124	507
D. D. Tannant	
38. Paleomagnetic study of deep-sea sediments from the Cagayan Ridge in the Sulu Sea: Results of Leg 124	511
V. Hsu, H. Shibuya, and D. L. Merrill	
39. Paleogene counterclockwise rotation of the Celebes Sea—orientation of ODP cores utilizing the secondary magnetization	519
H. Shibuya, D. L. Merrill, V. Hsu, and Leg 124 Shipboard Scientific Party	

SECTION 8: DATA REPORTS

40. <i>Data Report</i> : Occurrence of dolomite at Site 768 (Sulu Sea)	527
C. Betzler	
41. <i>Data Report</i> ., Major- and minor-element analysis of sediments from Sites 767, 768, and 769	531
G. W. Brass, D. Sims, S. E. Calvert, and M. T. von Breymann	
42. <i>Data Report</i> : Geochemical results from wireline logs in the Celebes Sea, Sites 767 and 770 of Leg 124	541
E. L. Pratson, C. Broglia, G. W. Brass, and R. D. Jarrard	

SECTION 9: POLICY

JOIDES advisory groups	555
Sample-Distribution Policy	559

SECTION 10: INDEX

Index	563
-----------------	-----

Back-pocket Foldout

Scientific Results: Volume 124, Chapter 10:

- Table 2. Calcareous nannofossil checklist of Hole 767B.
- Table 4. Calcareous nannofossil checklist of Hole 768B.
- Table 7. Calcareous nannofossil checklist of Hole 769B.

Back-pocket Microfiche

Scientific Results: Volume 124, Chapter 19:

- Table 1. Synthetic petrographic description and modal proportion of major phases of Sulu basement rocks and Cagayan Ridge volcanics.
- Table 2. Representative microprobe analyses and atomic proportions of pyroxenes from Sulu basement rocks and Cagayan Ridge volcanics.
- Table 3. Representative microprobe analyses and atomic proportions of plagioclases from Sulu basement rocks and Cagayan Ridge volcanics.
- Table 4. Representative microprobe analyses and atomic proportions of Cr-spinels, magnetites, and ilmenites from Sulu basement rocks and Cagayan Ridge volcanics.
- Table 5. Representative major element analyses of Sulu basement rocks and Cagayan Ridge volcanics.
- Table 6. Representative trace-element analyses of Sulu basement rocks and Cagayan Ridge volcanics.
