

# PROCEEDINGS OF THE OCEAN DRILLING PROGRAM

## VOLUME 127/128 SCIENTIFIC RESULTS PART 1

### JAPAN SEA

Covering Legs 127 and 128 of the cruises of the Drilling Vessel *JOIDES Resolution*  
Leg 127: Tokyo, Japan, to Pusan, South Korea, Sites 794-797,  
19 June 1989-20 August 1989  
Leg 128: Pusan, South Korea, to Pusan, South Korea, Sites 794, 798-799,  
20 August 1989-15 October 1989

### Leg 127

Kensaku Tamaki, Kenneth A. Pisciotta, James Allan, Joanne M. Alexandrovich, David A. Barnes, Sam Boggs, Hans-Jürgen Brumsack, Charlotte A. Brunner, Adrian Cramp, Laurent Jolivet, Orest E. Kawka, Itaru Koizumi, Shin'ichi Kuramoto, Marcus G. Langseth, James McEvoy, Jeffrey A. Meredith, Karl A. Mertz, Jr., Richard W. Murray, David C. Nobes, Atiur Rahman, Ralph Schaar, Kathryn P. Stewart, Ryuji Tada, Peter Thy, Luigi Vigliotti, Lisa D. White, Jobst J.M. Wippern, Shigeru Yamashita

*Shipboard Scientists*

### Leg 128

James C. Ingle, Jr., Kiyoshi Suyehiro, Marta T. von Breymann, James S. Bristow, Lloyd H. Burckle, Jacques Charvet, Barry A. Cragg, Peter B. deMenocal, Robert B. Dunbar, Karl B. Föllmi, John R. Griffin, Kurt A. Grimm, Yoza Hamano, Naoshi Hirata, Peter Holler, Caroline M. Isaacs, Michio Kato, Richard Kettler, Tara Kheradyar, Klaus A.O. Krumsiek, Hsin-Yi Ling, Ryo Matsumoto, Jay P. Muza, Ronald J. Parkes, André Pouclet, Steven D. Scott, Ruediger Stein, Anne A. Sturz

*Shipboard Scientists*

Leg 127: James Allan

Leg 128: Marta T. von Breymann

*Shipboard Staff Scientists*

Editorial Review Board:

Part 1: Kenneth A. Pisciotta, James C. Ingle, Jr., Marta T. von Breymann, John Barron

Part 2: Kensaku Tamaki, Kiyoshi Suyehiro, James Allan, Michael McWilliams

Prepared by the

OCEAN DRILLING PROGRAM

Norman J. Stewart, William R. Winkler, Sondra K. Stewart, Elsa K. Mazzullo, and Amanda R. Masterson

*Volume Editors*

in cooperation with the  
NATIONAL SCIENCE FOUNDATION  
and  
JOINT OCEANOGRAPHIC INSTITUTIONS, INC.

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Canada/Australia Consortium for the Ocean Drilling Program, Department of Energy, Mines and Resources (Canada) and Department of Primary Industries and Energy (Australia)

Deutsche Forschungsgemeinschaft (Federal Republic of Germany)

European Science Foundation Consortium for the Ocean Drilling Program (Belgium, Denmark, Finland, Iceland, Italy, Greece, The Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey)

Institut Français de Recherche pour l'Exploitation de la Mer (France)

National Science Foundation (United States)

Natural Environment Research Council (United Kingdom)

University of Tokyo, Ocean Research Institute (Japan)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

It is recommended that reference to the whole or to part of this volume be made in one of the following forms, as appropriate:

Pisciotta, K. A., Ingle, J. C., Jr., von Breymann, M. T., Barron, J., et al., 1992. *Proc. ODP, Sci. Results*, 127/128, Pt. 1: College Station, TX (Ocean Drilling Program).

Rahman, A., 1992. Calcareous nannofossil biostratigraphy of Leg 127 in the Japan Sea. *In* Pisciotta, K. A., Ingle, J. C., Jr., von Breymann, M. T., Barron, J., et al., 1992. *Proc. ODP, Sci. Results*, 127/128, Pt. 1: College Station, TX (Ocean Drilling Program), 171–186.

#### Effective Publication Dates of ODP *Proceedings*

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 135 (*Initial Reports*): May 1992  
Volumes 136/137 (*Initial Reports*): January 1992  
Volume 138 (*Initial Reports*): August 1992  
Volume 124 (*Scientific Results*): September 1991  
Volume 125 (*Scientific Results*): July 1992  
Volume 126 (*Scientific Results*): August 1992

#### Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77845-9547. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

# Foreword

By the National Science Foundation

The Ocean Drilling Program (ODP) is a major component of the National Science Foundation's continuing commitment to the study of the geologic processes that have shaped our planet and modified its environment. The scientific problems being addressed range from the geologic history and structure of continental margins to the processes responsible for the formation and alteration of the ocean's crust. In a time of enhanced public and scientific interest in problems of global change, ODP provides critical data on changes in ocean circulation, chemistry, and biologic productivity and their relation to changes in atmospheric circulation and glacial conditions. The Ocean Drilling Program has a unique role in addressing these problems, since it is the only facility for continuously sampling the geologic record of the ocean basins, which cover 70% of our planet.

The ODP is the successor to the Deep Sea Drilling Project (DSDP), which was a global reconnaissance of the ocean basins. DSDP began operations in 1968 at Scripps Institution of Oceanography, using a 400-foot drillship, the *Glomar Challenger*. DSDP was supported initially by only the National Science Foundation, with extensive involvement of international scientists who were invited to participate on drilling cruises. As this international interest continued to grow in the early 1970's, formal participation in the project was offered to the international geoscience community. In 1975, five nations (France, the Federal Republic of Germany, Japan, the United Kingdom, and the Soviet Union) accepted this commitment to joint planning and conduct of the project, as well as to financial support for operations. This International Phase of Ocean Drilling (IPOD) continued to 1983. Although the *Challenger* had reached the limits of her capabilities, the remarkable scientific success of the DSDP and the new questions it had generated demanded a continuing capability for drilling in the oceans.

The Ocean Drilling Program was organized, international participation was coordinated, a new drillship (the *JOIDES Resolution*) was contracted and outfitted, and her first cruise sailed in early 1985, within 18 months of the retirement of the *Challenger*. This is a remarkable accomplishment that reflects the efforts and excellence of the Joint Oceanographic Institutions, Inc. (prime contractor for ODP), Texas A&M University (science and ship operator), Lamont-Doherty Geological Observatory (logging operator), and the international science community in organizing and planning the new program. It was argued in planning for the ODP that a larger drillship was required to provide space for the increasing U.S. and international demand for shipboard participation, improved and expanded laboratory capabilities, and improvements in coring and logging systems. A larger and better equipped vessel would also provide better stability and working conditions in high-latitude regions of the oceans. The success of the *JOIDES Resolution* has proven the wisdom of these early arguments.

ODP now has operated in all oceans except the ice-covered Arctic. We have drilled above the Arctic circle and within sight of the Antarctic continent. Over 1000 scientists from 25 nations have participated in the initial ODP cruises. The larger scientific parties have allowed an increased emphasis on student participation and training aboard ship. The state-of-the-art laboratories support rapid and complete initial analyses of samples that provide both scientific results and guide subsequent shore-based studies. Nearly 1000 additional scientists have used these data and requested samples from the program's core and data archives for continuing study. The geochemical and geophysical logging capability is unsurpassed in either academia or industry and has provided remarkable new data with which to study the Earth. New experiments to measure and monitor geologic processes have been deployed in ODP boreholes.

The international commitment to ocean drilling has increased in the ODP. In addition to our five partners in IPOD—France, the Federal Republic of Germany, Japan, the Soviet Union, and the United Kingdom—two consortia have joined ODP: Canada-Australia and the European Science Foundation (representing Belgium, Denmark, Finland, Greece, Iceland, Italy, The Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey). The 20 countries of the ODP represent the community of nations that have a global interest in the geosciences and oceanography. This global scientific participation has assured the program's scientific

excellence by focusing and integrating the combined scientific knowledge and capabilities of the program's 20 nations. It has allowed problems of a global nature to be addressed by providing databases and background studies which are openly shared for planning and interpreting drilling results. It has eased problems of access to territorial waters, allowing comparative studies to be done among oceans. Finally, the international sharing of program costs has allowed this important and large program to proceed without detrimental impact to the research budgets of any one nation.

The Ocean Drilling Program, like its predecessor, DSDP, serves as a model for planning, conducting, and financing research to address problems of global importance. The National Science Foundation is proud to have a leading role in this unique international program, and we look forward to its continuing success.

# Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents scientific and engineering results from the Ocean Drilling Program (ODP). The papers presented here address the scientific and technical goals of the program, which include providing a global description of geological and geophysical structures including passive and active margins and sediment history, and studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations.

The Ocean Drilling Program, an international activity, operates a specially equipped deep-sea drilling ship, the *JOIDES Resolution* (Sedco/BP 471), which contains state-of-the-art laboratories, equipment, and computers. The ship is 471 feet (144 meters) long, is 70 feet (21 meters) wide, and has a displacement of 18,600 short tons. Her derrick towers 211 feet (64 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails with a scientific and technical crew of 51 and a ship's crew (including the drill crew) of 62. The size and ice-strengthening of the ship allow drilling in high-seas and ice-infested areas as well as permitting a large group of multidisciplinary scientists to interact as part of the scientific party.

Logging, or measurements in the drilled holes, is an important part of the program. ODP provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a borehole televiewer is available for imaging the wall of the hole, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the wall of the hole, and a vertical seismic profiler can record reflectors from below the total depth of the hole.

The management of the Ocean Drilling Program involves a partnership of scientists and governments. International oversight and coordination are provided by the ODP Council, a governmental consultative body of the partner countries, which is chaired by a representative from the United States National Science Foundation. The ODP Council periodically reviews the general progress of the program and discusses financial plans and other management issues. Overall scientific and management guidance is provided to the operators of the program by representatives from the group of institutions involved in the program, called the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES).

The Executive Committee (EXCOM), made up of the administrative heads of the JOIDES institutions, provides general oversight for ODP. The Planning Committee (PCOM), with its advisory structure, is made up of working scientists and provides scientific advice and detailed planning. PCOM has a network of panels and working groups that screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical-survey data and other safety and siting information. PCOM uses the recommendations of the panels and committees to select drilling targets, to specify the location and major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists.

Joint Oceanographic Institutions, Inc. (JOI), a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor for ODP. JOI is responsible for seeing that the scientific objectives, plans, and recommendations of the JOIDES committees are translated into scientific operations consistent with scientific advice and budgetary constraints. JOI subcontracts the operations of the program to two universities: Texas A&M University and Lamont-Doherty Geological Observatory of Columbia University. JOI is also responsible for managing the U.S. contribution to ODP.

Texas A&M University (TAMU) serves as science operator for ODP. In this capacity, TAMU is responsible for planning the specific ship operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with PCOM and the relevant

panels. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and computers and by providing logistical and technical support for shipboard scientific teams. Onshore, TAMU manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of scientific results.

Lamont-Doherty Geological Observatory (LDGO) of Columbia University is responsible for the program's logging operation, including processing the data and providing assistance to scientists for data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDGO.

Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at three sites: ODP Pacific and Indian Ocean cores at TAMU, ODP and DSDP Atlantic and Antarctic cores at LDGO, and DSDP Pacific and Indian Ocean cores at the Scripps Institution of Oceanography.

Scientific achievements of ODP include new information on early seafloor spreading and how continents separate and the margins evolve. The oldest Pacific crust has been drilled and sampled. We have new insights into glacial cycles and the fluctuations of ocean currents throughout geological time. Many of the scientific goals can be met only with new technology; thus the program has focused on engineering as well as science. To date, ODP engineers have demonstrated the capability to drill on bare rock at mid-ocean-ridge sites and have developed techniques for drilling in high-temperature and corrosive regions typical of hydrothermal vent areas. A new diamond coring system promises better core recovery in difficult areas.

In addition, ODP is cooperating closely with other geological and geophysical programs; for example, in 1991 the first hole was drilled by ODP for emplacement of a seismometer near Hawaii for the Ocean Seismic Network. JOI is pleased to have been able to play a facilitating role in the Ocean Drilling Program and its cooperative activities, and we are looking forward to many new results to come.

D. James Baker  
President  
Joint Oceanographic Institutions, Inc.

Washington, D.C.

# Preface

The *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* contain specialty papers presenting the results of up to one and one-half years of research in various aspects of scientific ocean drilling. I acknowledge with thanks the authors of the papers published in this volume, who thereby have enabled future investigators to gain ready access to the results of their research.

Each of the papers submitted to a *Scientific Results* volume undergoes rigorous peer review by at least two specialists in the author's research field. A paper typically goes through one or more revision cycles before being accepted for publication. Our goal is to maintain a peer-review system comparable to those of the most highly regarded journals in the geological sciences.

The Editorial Review Board for a *Scientific Results* volume is responsible for obtaining peer reviews of papers submitted to the volume. This board usually is made up of the two co-chief scientists for the cruise, the ODP staff scientist for the cruise, and one external specialist who is familiar with the geology of the area investigated. In addition, the ODP staff editor assigned to the volume helps with any manuscripts that require special attention, such as those by authors who need assistance with English expression.

*Scientific Results* volumes may also contain short reports consisting of good data that are not ready for final interpretation. Papers in this category are segregated in a section in the back of the volume called Data Reports. Although no interpretation is permitted, these papers ordinarily contain a section on methodology or procedures. Data Report papers are read carefully by at least one specialist to make sure they are well organized, comprehensive, and discuss the techniques thoroughly.

In acknowledgment of the contributions made by this volume's Editorial Review Board, names of the individual Board members are listed on the title page. Reviewers of manuscripts for this volume, whose efforts are so essential to the success of the publication, are listed in the front portion of the book, without attribution to a particular manuscript.

On behalf of the Ocean Drilling Program, I extend sincere appreciation to members of the Editorial Review Boards and to the reviewers for giving so generously of their time and efforts in ensuring that only papers of high scientific quality are published in the *Proceedings*.

Philip D. Rabinowitz

1000 Discovery Drive  
College Station, TX 77845-9547*

James S. Bristow  
LDGO Logging Scientist

*Borehole Research Group  
Lamont Doherty Geological Observatory  
Columbia University  
Palisades, New York 10964*

Lloyd H. Burckle  
Paleontologist (diatoms)

*Lamont-Doherty Geological Observatory  
Columbia University  
Palisades, New York 10964*

Jacques Charvet  
Sedimentologist

*Laboratoire de Géologie Structurale  
Université d'Orléans  
45067 Orléans Cedex 2  
France*

Barry A. Cragg  
Microbiologist

*Scottish Marine Biological Association  
P.O. Box 3  
Oban, Argyll P434 4AD  
United Kingdom*

Peter B. deMenocal  
Logging Scientist

*Lamont-Doherty Geological Observatory  
Columbia University  
Palisades, New York 10964*

Robert B. Dunbar  
Sedimentologist

*Department of Geology and Geophysics  
Rice University  
P.O. Box 1892  
Houston, Texas 77251-1892*

Karl B. Föllmi  
Sedimentologist

*Geologisches Institut  
Eidgenössische Technische Hochschule  
Sonneggstrasse 5  
CH-8092 Zürich  
Switzerland*

John R. Griffin  
Logging Scientist

*Department of Geology  
University of Nebraska  
Lincoln, Nebraska 68588-0340*

Kurt A. Grimm  
Sedimentologist

*Earth Sciences Board  
University of California, Santa Cruz  
Santa Cruz, California 95064*

Yozo Hamano  
Paleomagnetist

*Geophysical Institute  
University of Tokyo  
Faculty of Science  
Tokyo, Bunkyo-ku 113  
Japan*

Naoshi Hirata  
Physical Properties Specialist

*Department of Earth Sciences  
Chiba University  
1-33 Yayoi-cho  
Chiba 260  
Japan*

Peter Holler  
Physical Properties Specialist

*Geologisches-Paläontologisches Institut  
Universität Kiel  
Olshausenstrasse 40  
D-2300 Kiel  
Federal Republic of Germany*

Caroline M. Isaacs  
Sedimentologist

*U.S. Geological Survey  
345 Middlefield Road  
Menlo Park, California 94025*

Michio Kato  
Paleontologist (foraminifers)

*Department of Geology  
Kanazawa University  
1-1 Marunouchi  
Kanazawa City 920  
Japan*

\*Addresses at time of cruise.

Richard Kettler  
Inorganic Geochemist  
*Department of Geology  
University of Nebraska  
Lincoln, Nebraska 68588-0340*

Tara Kheradgar  
Paleontologist (foraminifers)  
*Department of Geology  
Stanford University  
Stanford, California 94305*

Klaus A.O. Krumsiek  
Paleomagnetist  
*Geologisches Institut  
Universität Köln  
Zulpicherstrasse 49  
5000 Köln 1  
Federal Republic of Germany*

Hsin-Yi Ling  
Paleontologist  
*Department of Geology  
Northern Illinois University  
DeKalb, Illinois 60115*

Ryo Matsumoto  
Sedimentologist  
*Geological Institute  
University of Tokyo  
Faculty of Science  
Hongo 7-3-1, Bunkyo-ku  
Tokyo 113  
Japan*

Jay P. Muza  
Paleontologist (nannofossils)  
*Department of Geology  
Florida State University  
Tallahassee, Florida 32306*

Ronald J. Parkes  
Microbiologist  
*Scottish Marine Biological Association  
P.O. Box 3  
Oban, Argyll P434 4AD  
United Kingdom*

André Pouclet  
Igneous Petrologist

## SEDCO OFFICIALS

Captain Anthony Ribbens  
Master of the Drilling Vessel  
*Underseas Drilling, Inc.  
707 Texas Avenue South  
Suite 103D  
College Station, Texas 77840-1917*

Jack Tarbutton  
Drilling Superintendent  
*Underseas Drilling, Inc.  
707 Texas Avenue South  
Suite 103D  
College Station, Texas 77840-1917*

**Leg 127****ODP ENGINEERING AND OPERATIONS PERSONNEL**

Glen N. Foss                      Operations Superintendent

**ODP TECHNICAL AND LOGISTICS PERSONNEL**

Larry Bernstein	Computer System Manager
Stacey Cervantes	Photographer
MaryAnn Cusimano	Chemistry Technician
Kenneth du Vall	Marine Technician
Nicholas Evans	Marine Technician
Jenny Glasser	Marine Technician
Burney Hamlin	Laboratory Officer
Michiko Hitchcox	Yeoperson
Jia-Yuh Liu	Marine Technician
Matt Mefferd	Assistant Laboratory Officer
Peggy Myre	Curatorial Representative
Luis Pinto Alvarez	Chemistry Technician
Mike Reitmeyer	Electronics Technician
Mark C. Simpson	Marine Technician
Don Sims	Marine Technician
Barry Weber	Electronics Technician
Charles Williamson	Marine Technician

**Leg 128****ODP ENGINEERING AND OPERATIONS PERSONNEL**Eugene Pollard                      Drilling Superintendent  
Hiroshi Matsuoka                      Special Tools Engineer**ODP TECHNICAL AND LOGISTICS PERSONNEL**

Wendy J. Autio	Assistant Laboratory Officer
Jim Briggs	Electronics Technician
Scott Chaffey	Curatorial Representative
Jo Claesgens	Yeoperson
Valerie Clark	Chemistry Technician
Bart Collinsworth	Marine Technician
Joe DeMorett	Marine Technician
John R. Eastlund	Computer System Manager
David Erickson	Electronics Technician
Chris Galida	Photographer
Ted ("Gus") Gustafson	Marine Technician
Kazushi ("Kuro") Kuroki	Marine Technician
William G. Mills	Laboratory Officer
Michael Moore	Marine Technician
Joan Perry	X-ray Technician
Joe Powers	Chemistry Technician
Dawn J. Wright	Marine Technician

# TABLE OF CONTENTS

## VOLUME 127/128—SCIENTIFIC RESULTS (PART 1)

(Synthesis papers are located in Part 2, irrespective of subject matter)

### SECTION 1: SEDIMENTOLOGY

1. Impact of silica diagenesis on physical property variations . . . . .	3
D. C. Nobes, R. W. Murray, S. Kuramoto, K. A. Pisciotta, and P. Holler	
2. Textures, microstructures, and lithologies of Japan Sea sediments from the lower portion of Hole 799B, Leg 128 . . . . .	33
J. R. Griffin and N. Lindsley-Griffin	
3. Thermal history of Japan Sea sediments from isotopic studies of diagenetic silica and associated pore waters . . . . .	49
K. A. Pisciotta, R. W. Murray, and H.-J. Brumsack	
4. Preparation of weakly consolidated, laminated hemipelagic sediment for high-resolution visual microanalysis: an analytical method . . . . .	57
K. A. Grimm	
5. Phosphates and glauconites of Sites 798 and 799 . . . . .	63
K. B. Föllmi and M. von Breymann	
6. Diagenetic dolomite, calcite, rhodochrosite, magnesite, and lansfordite from Site 799, Japan Sea— implications for depositional environments and the diagenesis of organic-rich sediments . . . . .	75
R. Matsumoto	
7. Provenance of Miocene sandstones from Sites 796, 797, and 799, Japan Sea . . . . .	99
S. Boggs, Jr., and A. Seyedolali	
8. Sedimentology, phenocryst chemistry, and age—Miocene “Blue Tuff”: Sites 794 and 796, Japan Sea . . . . .	115
D. A. Barnes, P. Thy, and P. Renne	
9. Diagenetic albitization, zeolitization, and replacement in Miocene sandstones, Sites 796, 797, and 799, Japan Sea . . . . .	131
S. Boggs, Jr., and A. Seyedolali	

### SECTION 2: PALEOENVIRONMENTAL STUDIES

10. Calcareous nannofossil biostratigraphy from the Japan Sea, Sites 798 and 799: evidence for an oscillating Pleistocene oceanographic frontal boundary . . . . .	155
J. P. Muza	
11. Calcareous nannofossil biostratigraphy of Leg 127 in the Japan Sea . . . . .	171
A. Rahman	
12. Paleoenvironment and biostratigraphy of foraminifers at Sites 794, 795, 796, and 797 in the Japan Sea . . . . .	187
C. A. Brunner	
13. Radiolarians from the Sea of Japan: Leg 128 . . . . .	225
H.-Y. Ling	

14. Late Neogene silicoflagellates and ebridians from Leg 128, Sea of Japan . . . . .	237
H.-Y. Ling	
15. Diatom biostratigraphy of the Japan Sea: Leg 127 . . . . .	249
I. Koizumi	
16. Radiolarians from Sites 794, 795, 796, and 797 (Japan Sea) . . . . .	291
J. M. Alexandrovich	
17. Dissolution and preservation of diatoms in the Sea of Japan and the effect on sediment thanatocoenosis . . . . .	309
L. H. Burckle, A. Sturz, and G. Emanuele	
18. Preliminary results of high-resolution pollen analyses of selected Pleistocene intervals from Holes 798A, 798B, and 798C . . . . .	317
L. E. Heusser	
19. Neogene palynology of Holes 794A, 795A, and 797B in the Sea of Japan: stratigraphic and paleoenvironmental implications of the preliminary results . . . . .	325
L. E. Heusser	
20. Pliocene and Pleistocene abundance and preservation of siliceous microfossil assemblages from Sites 794, 795, and 797: implications for circulation and productivity in the Japan Sea .	341
L. D. White and J. M. Alexandrovich	
21. Diatom biostratigraphy: Leg 128 . . . . .	359
L. H. Burckle	
22. Benthic foraminifers from the Japan Sea: Leg 128 . . . . .	365
M. Kato	
23. Paleoclimatic applications of downhole logs: Pliocene-Pleistocene results from Hole 798B, Sea of Japan . . . . .	393
P. B. deMenocal, J. F. Bristow, and R. Stein	
24. Pliocene-Pleistocene fluctuations in composition and accumulation rates of eolo-marine sediments at Site 798 (Oki Ridge, Sea of Japan) and climatic change: preliminary results . .	409
M. Dersch and R. Stein	
25. Late Cenozoic changes in flux rates and composition of organic carbon at Sites 798 and 799 (Sea of Japan) . . . . .	423
R. Stein and R. Stax	
26. Late Pliocene-Quaternary biosiliceous sedimentation at Site 798, Japan Sea . . . . .	439
R. B. Dunbar, P. B. deMenocal, and L. Burckle	
27. Pleistocene planktonic foraminiferal assemblages and paleotemperature fluctuations in Japan Sea, Site 798 . . . . .	457
T. Kheradyar	
28. Miocene pollen stratigraphy of Leg 127 in the Japan Sea and comparison with the standard Neogene pollen floras of Northeast Japan . . . . .	471
T. Yamanoi	
29. Miocene benthic foraminifers at Sites 794, 795, and 797 in the Sea of Japan with reference to the Foram Sharp Line in the Honshu arc . . . . .	493
R. Nomura	
30. Siliceous sponge spicules from Site 795 . . . . .	541
R. Zolnik, K. McCartney, and L. D. White	

### SECTION 3: DARK AND LIGHT CYCLES

31. High-resolution imaging of laminated biosiliceous sediments and their paleoceanographic significance (Quaternary, Site 798, Oki Ridge, Japan Sea) . . . . . 547  
K. A. Grimm
32. Dark-light rhythms in the sediments of the Japan Sea: preliminary results from Site 798, with some additional results from Sites 797 and 799 . . . . . 559  
K. B. Föllmi, A. Cramp, K. E. Föllmi, J. M. Alexandrovich, C. Brunner, L. H. Burckle, M. Casey, P. deMenocal, R. B. Dunbar, K. A. Grimm, P. Holler, J. C. Ingle, Jr., T. Kheradyyar, J. McEvoy, D. C. Nobes, R. Stein, R. Tada, M. T. von Breymann, and L. D. White
33. Correlation of dark and light layers, and the origin of their cyclicity in the Quaternary sediments from the Japan Sea . . . . . 577  
R. Tada, I. Koizumi, A. Cramp, and A. Rahman

### SECTION 4: GEOCHEMISTRY

34. Geochemistry of sediments and interstitial waters from Oki Ridge and Kita-Yamato Trough, Japan Sea . . . . . 605  
A. A. Sturz, B. B. Hanan, and G. Emanuele
35. Pyrolytic assay of samples from Site 799 . . . . . 623  
B. J. Katz
36. Stable and radiogenic isotopes in pore waters from Leg 127, Japan Sea . . . . . 635  
H.-J. Brumsack, E. Zuleger, E. Gohn, and R. W. Murray
37. Depositional and diagenetic behavior of barium in the Japan Sea . . . . . 651  
M. T. von Breymann, H. Brumsack, and K. C. Emeis
38. Geochemistry and petrology of organic matter in Miocene to Quaternary deep sea sediments from the Japan Sea (Sites 798 and 799) . . . . . 667  
E. Lichtfouse, R. Littke, U. Disko, H. Willsch, J. Rullkötter, and R. Stein
39. Rare earth, major, and trace element composition of Leg 127 sediments . . . . . 677  
R. W. Murray, M. R. Buchholtz ten Brink, H.-J. Brumsack, D. C. Gerlach, and G. P. Russ III
40. Causes of the oxygen isotopic depletion of interstitial waters from Sites 798 and 799, Japan Sea, Leg 128 . . . . . 697  
R. Matsumoto
41. Trace-element geochemistry of sediments and sulfur isotope geochemistry of framboidal pyrite from Site 795, Leg 127, Japan Sea . . . . . 705  
T. Masuzawa, J. Takada, and R. Matsushita
42. Geochemistry of rare earths and other trace elements in sediments from Sites 798 and 799, Japan Sea . . . . . 719  
Y. Minai, R. Matsumoto, Y. Watanabe, and T. Tominaga
43. Mössbauer characterization of sediments from Sites 798 and 799, Japan Sea . . . . . 739  
Y. Minai, I. Kusudo, R. Matsumoto, H. Sato, and T. Tominaga
44. Helium isotope ratios of pore gases in deep-sea sediments, Leg 128 . . . . . 747  
Y. Sano, M. Sakamoto, J. Ishibashi, H. Wakita, and R. Matsumoto

**SECTION 5: MICROBIOLOGY**

45. The potential for bacteria growth in deep sediment layers of the Japan Sea, Hole 798B—  
Leg 128 . . . . . 755  
J. M. Getliff, J. C. Fry, B. A. Cragg, and R. J. Parkes

46. Bacterial biomass and activity in the deep sediment layers of the Japan Sea, Hole 798B . . . 761  
B. A. Cragg, S. M. Harvey, J. C. Fry, R. A. Herbert, and R. J. Parkes

**Back-Pocket Foldout\***

Chapter 22:

- Table 2. Abundance and occurrence of benthic foraminifers, Leg 128, Hole 798B.
- Table 3. Abundance and occurrence of benthic foraminifers, Leg 128, Hole 799A.

**Back-Pocket Microfiche\***

Chapter 19:

- Appendix A. Preliminary counts of pollen and pollen concentration from Hole 794A.
- Appendix B. Preliminary counts of pollen and pollen concentration from Hole 795A.
- Appendix C. Preliminary counts of pollen and pollen concentration from Hole 797B.

\*Back-pocket foldout and microfiche are found in the back of Part 2.
