

# PROCEEDINGS OF THE OCEAN DRILLING PROGRAM

VOLUME 139

## SCIENTIFIC RESULTS MIDDLE VALLEY, JUAN DE FUCA RIDGE

Covering Leg 139 of the cruises of the Drilling Vessel *JOIDES Resolution*,  
San Diego, California, to Victoria, British Columbia, Canada, Sites 855-858,  
4 July-11 September 1991

Michael J. Mottl, Earl E. Davis, Andrew T. Fisher,  
Paul A. Baker, Keir Becker, Maria Boni, Jacques J. Boulègue,  
Charlotte A. Brunner, Rowena C. Duckworth, James M. Franklin,  
Wayne D. Goodfellow, Henrike M. Gröschel-Becker, Masataka Kinoshita,  
Boris A. Konyukhov, Ulrike Körner, Sergey G. Krasnov, Marcus G. Langseth,  
Shaozhi Mao, Vesna Marchig, Katsumi Marumo, Hirokuni Oda,  
Catherine A. Rigsby, Bernd R.T. Simoneit, Debra S. Stakes,  
Heinrich W. Villinger, Charles G. Wheat, Jean K. Whelan, Robert A. Zierenberg  
*Shipboard Scientists*

Andrew T. Fisher  
*Shipboard Staff Scientist*

Editorial Review Board:  
Michael J. Mottl, Earl E. Davis, Andrew T. Fisher, John F. Slack

Prepared by the  
OCEAN DRILLING PROGRAM  
TEXAS A&M UNIVERSITY

Nancy K. McQuiston and Lona Haskins Dearmont  
*Volume Editors*

in cooperation with the  
NATIONAL SCIENCE FOUNDATION  
and  
JOINT OCEANOGRAPHIC INSTITUTIONS, INC.

This publication was prepared by the Ocean Drilling Program, Texas A&M University, as an account of work performed under the international Ocean Drilling Program, which is managed by Joint Oceanographic Institutions, Inc., under contract with the National Science Foundation. Funding for the program was provided by the following agencies at the time of this cruise:

Canada/Australia Consortium for the Ocean Drilling Program, Department of Energy, Mines and Resources (Canada), and Department of Primary Industries and Energy (Australia)

Deutsche Forschungsgemeinschaft (Federal Republic of Germany)

European Science Foundation Consortium for Ocean Drilling (Belgium, Denmark, Finland, Iceland, Italy, Greece, The Netherlands, Norway, Spain, Sweden, Switzerland, and Turkey)

Institut Français de Recherche pour l'Exploitation de la Mer (France)

National Science Foundation (United States)

Natural Environment Research Council (United Kingdom)

University of Tokyo, Ocean Research Institute (Japan)

Any opinions, findings, and conclusions or recommendations expressed in this publication are those of the author(s) and do not necessarily reflect the views of the National Science Foundation, the participating agencies, Joint Oceanographic Institutions, Inc., Texas A&M University, or Texas A&M Research Foundation.

It is recommended that reference to the whole or to part of this volume be made in one of the following forms, as appropriate:

Mottl, M.J., Davis, E.E., Fisher, A.T., and Slack, J.F. (Eds.), 1994. *Proc. ODP, Sci. Results*, 139: College Station, TX (Ocean Drilling Program).

Rohr, K.M.M., and Schmidt, U., 1994. Seismic structure of Middle Valley near Sites 855–858, Leg 139, Juan de Fuca Ridge. *In* Mottl, M.J., Davis, E.E., Fisher, A.T., and Slack, J.F. (Eds.), *Proc. ODP, Sci. Results*, 139: College Station, TX (Ocean Drilling Program), 3–17.

#### Effective Publication Dates of ODP Proceedings

According to the International Code of Zoological Nomenclature, the date of publication of a work and of a contained name or statement affecting nomenclature is the date on which the publication was mailed to subscribers, placed on sale, or when the whole edition is distributed free of charge, mailed to institutions and individuals to whom free copies are distributed. The mailing date, *not the printed date*, is the correct one.

The mailing dates of recent *Proceedings of the Ocean Drilling Program* are as follows:

Volume 146 (*Initial Reports*): February 1994  
Volumes 147/148 (*Initial Reports*): December 1993  
Volume 149 (*Initial Reports*): June 1994  
Volumes 133/132 (*Scientific Results*): November 1993  
Volume 135 (*Scientific Results*): May 1994  
Volume 136 (*Scientific Results*): December 1993

#### Distribution

Copies of this publication may be obtained from Publications Distribution Center, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77845-9547. Orders for copies will require advance payment. See current ODP publication list for price and availability of this publication.

# Foreword

By the National Science Foundation

The National Science Foundation is proud to play a leading role in partnership with the U.S. oceanographic community in the operation and management of the Ocean Drilling Program (ODP). We are equally proud of the cooperation and commitment of our international partners, who contribute both financial and intellectual resources required to maintain the high quality of this unique program. The Ocean Drilling Program, like its predecessor, the Deep Sea Drilling Project (DSDP), is a model for the organization and planning of research to address global scientific problems that are of high priority internationally and of long-term interest to the scientific community and general public.

Major scientific themes guiding the development of specific drilling cruises range from determining the causes and effects of oceanic and climatic variability to understanding the circulation of fluids in the ocean crust and the resultant formation of mineral deposits. Although such studies are at the forefront of basic scientific inquiry into the processes that control and modify the global environment, they are equally important in providing the background for assessing man's impact on the global environment or for projecting resource availability for future generations.

The transition from the DSDP to the ODP was marked by a number of changes. The 471-foot *JOIDES Resolution*, which replaced the *Glomar Challenger*, has allowed larger scientific parties and the participation of more graduate students, a larger laboratory and technical capability, and operations in more hostile ocean regions. The *JOIDES Resolution* has drilled in all of the world's oceans, from the marginal ice regions of the Arctic to within sight of the Antarctic continent. Over 1,200 scientists and students from 26 nations have participated on project cruises. Cores recovered from the cruises and stored in ODP repositories in the United States and Europe have provided samples to an additional 1,000 scientists for longer term post-cruise research investigations. The downhole geochemical and geophysical logging program, unsurpassed in either academia or industry, is providing remarkable new data with which to study the Earth.

In 1994, NSF and our international partners renewed our commitment to the program for its final phase. Of the 20 countries that supported ODP initially, only one, Russia, has been unable to continue for financial reasons. As the reputation and scientific impact of the program continue to grow internationally, we hope to add additional members and new scientific constituencies. This global scientific participation continues to assure the program's scientific excellence by focusing and integrating the combined scientific knowledge and capabilities of its member nations.

We wish the program smooth sailing and good drilling!

Neal Lane  
Director  
National Science Foundation

Arlington, Virginia

# Foreword

By Joint Oceanographic Institutions, Inc.

This volume presents scientific and engineering results from the Ocean Drilling Program (ODP). The papers presented here address the scientific and technical goals of the program, which include providing a global description of geological and geophysical structures including passive and active margins and sediment history, and studying in detail areas of major geophysical activity such as mid-ocean ridges and the associated hydrothermal circulations.

The Ocean Drilling Program, an international activity, operates a specially equipped deep-sea drilling ship, the *JOIDES Resolution* (Sedco/BP 471), which contains state-of-the-art laboratories, equipment, and computers. The ship is 471 feet (144 meters) long, is 70 feet (21 meters) wide, and has a displacement of 18,600 short tons. Her derrick towers 211 feet (64 meters) above the waterline, and a computer-controlled dynamic-positioning system stabilizes the ship over a specific location while drilling in water depths up to 27,000 feet (8230 meters). The drilling system collects cores from beneath the seafloor with a derrick and drawworks that can handle 30,000 feet (9144 meters) of drill pipe. More than 12,000 square feet (1115 square meters) of space distributed throughout the ship is devoted to scientific laboratories and equipment. The ship sails with a scientific and technical crew of 51 and a ship's crew (including the drill crew) of 62. The size and ice-strengthening of the ship allow drilling in high seas and ice-infested areas as well as permitting a large group of multidisciplinary scientists to interact as part of the scientific party.

Logging, or measurements in the drilled holes, is an important part of the program. ODP provides a full suite of geochemical and geophysical measurements for every hole deeper than 1300 feet (400 meters). For each such hole, there are lowerings of basic oil-industry tools: nuclear, sonic, and electrical. In addition, a borehole televiewer is available for imaging the wall of the hole, a 12-channel logging tool provides accurate velocity and elastic property measurements as well as sonic waveforms for spectral analysis of energy propagation near the wall of the hole, and a vertical seismic profiler can record reflectors from below the total depth of the hole.

The management of the Ocean Drilling Program involves a partnership of scientists and governments. International oversight and coordination are provided by the ODP Council, a governmental consultative body of the partner countries, which is chaired by a representative from the United States National Science Foundation. The ODP Council periodically reviews the general progress of the program and discusses financial plans and other management issues. Overall scientific and management guidance is provided to the operators of the program by representatives from the group of institutions involved in the program, called the Joint Oceanographic Institutions for Deep Earth Sampling (JOIDES).

The Executive Committee (EXCOM), made up of the administrative heads of the JOIDES institutions, provides general oversight for ODP. The Planning Committee (PCOM), with its advisory structure, is made up of working scientists and provides scientific advice and detailed planning. PCOM has a network of panels and working groups that screen drilling proposals, evaluate instrumentation and measurement techniques, and assess geophysical-survey data and other safety and siting information. PCOM uses the recommendations of the panels and committees to select drilling targets, to specify the location and major scientific objectives of each two-month drilling segment or leg, and to provide the science operator with nominations for co-chief scientists.

Joint Oceanographic Institutions, Inc. (JOI), a nonprofit consortium of U.S. oceanographic institutions, serves as the National Science Foundation's prime contractor for ODP. JOI is responsible for seeing that the scientific objectives, plans, and recommendations of the JOIDES committees are translated into scientific operations consistent with scientific advice and budgetary constraints. JOI subcontracts the operations of the program to two universities: Texas A&M University and Lamont-Doherty Earth Observatory of Columbia University. JOI is also responsible for managing the U.S. contribution to ODP.

Texas A&M University (TAMU) serves as science operator for ODP. In this capacity, TAMU is responsible for planning the specific ship operations, actual drilling schedules, and final scientific rosters, which are developed in close cooperation with PCOM and the relevant

panels. The science operator also ensures that adequate scientific analyses are performed on the cores by maintaining the shipboard scientific laboratories and computers and by providing logistical and technical support for shipboard scientific teams. Onshore, TAMU manages scientific activities after each leg, is curator for the cores, distributes samples, and coordinates the editing and publication of scientific results.

Lamont-Doherty Earth Observatory (LDEO) of Columbia University is responsible for the program's logging operation, including processing the data and providing assistance to scientists for data analysis. The ODP Data Bank, a repository for geophysical data, is also managed by LDEO.

Core samples from ODP and the previous Deep Sea Drilling Project are stored for future investigation at three sites: ODP Pacific and Indian Ocean cores at TAMU, ODP and DSDP Atlantic and Antarctic cores at LDEO, and DSDP Pacific and Indian Ocean cores at the Scripps Institution of Oceanography.

Scientific achievements of ODP include new information on early seafloor spreading and how continents separate and the margins evolve. The oldest Pacific crust has been drilled and sampled. We have new insights into glacial cycles and the fluctuations of ocean currents throughout geological time. Many of the scientific goals can be met only with new technology; thus the program has focused on engineering as well as science. To date, ODP engineers have demonstrated the capability to drill on bare rock at mid-ocean-ridge sites and have developed techniques for drilling in high-temperature and corrosive regions typical of hydrothermal vent areas. A new diamond coring system promises better core recovery in difficult areas.

In addition, ODP is cooperating closely with other geological and geophysical programs; for example, in 1991 the first hole was drilled by ODP for emplacement of a seismometer near Hawaii for the Ocean Seismic Network. JOI is pleased to have been able to play a facilitating role in the Ocean Drilling Program and its cooperative activities, and we are looking forward to many new results to come.

D. James Baker  
President  
Joint Oceanographic Institutions, Inc.

Washington, D.C.

# Preface

The *Scientific Results* volumes of the *Proceedings of the Ocean Drilling Program* contain specialty papers presenting the results of up to one and one-half years of research in various aspects of scientific ocean drilling. I acknowledge with thanks the authors of the papers published in this volume, who thereby have enabled future investigators to gain ready access to the results of their research.

Each of the papers submitted to a *Scientific Results* volume undergoes rigorous peer review by at least two specialists in the author's research field. A paper typically goes through one or more revision cycles before being accepted for publication. Our goal is to maintain a peer-review system comparable to those of the most highly regarded journals in the geological sciences.

The Editorial Review Board for a *Scientific Results* volume is responsible for obtaining peer reviews of papers submitted to the volume. This board usually is made up of the two co-chief scientists for the cruise, the ODP staff scientist for the cruise, and one external specialist who is familiar with the geology of the area investigated. In addition, the ODP staff editor assigned to the volume helps with any manuscripts that require special attention, such as those by authors who need assistance with English expression.

*Scientific Results* volumes may also contain short reports consisting of good data that are not ready for final interpretation. Papers in this category are segregated in a section in the back of the volume called Data Reports. Although no interpretation is permitted, these papers ordinarily contain a section on methodology or procedures. Data Report papers are read carefully by at least one specialist to make sure they are well organized, comprehensive, and discuss the techniques thoroughly.

In acknowledgment of the contributions made by this volume's Editorial Review Board, names of the individual Board members are listed on the title page. Reviewers of manuscripts for this volume, whose efforts are so essential to the success of the publication, are listed in the front portion of the book, without attribution to a particular manuscript.

On behalf of the Ocean Drilling Program, I extend sincere appreciation to members of the Editorial Review Boards and to the reviewers for giving so generously of their time and efforts in ensuring that only papers of high scientific quality are published in the *Proceedings*.

Philip D. Rabinowitz  
Director  
Ocean Drilling Program  
Texas A&M University

College Station, Texas

# TABLE OF CONTENTS

## VOLUME 139—SCIENTIFIC RESULTS

### SECTION 1: SITE GEOLOGY AND GEOPHYSICS

1. Seismic structure of Middle Valley near Sites 855-858, Leg 139, Juan de Fuca Ridge . . . . . 3  
K.M.M. Rohr and U. Schmidt
2. Low crustal magnetization of the Middle Valley sedimented rift inferred from sea-surface  
magnetic anomalies . . . . . 19  
R.G. Currie and E.E. Davis
3. High-resolution magnetic surveys over the Middle Valley mounds,  
northern Juan de Fuca Ridge . . . . . 29  
M.A. Tivey

### SECTION 2: BIOSTRATIGRAPHY

4. Planktonic foraminiferal biostratigraphy and paleoceanography of late Quaternary turbidite  
sequences at Holes 856A, 857A, and 857C, Leg 139 . . . . . 39  
C.A. Brunner
5. Late Quaternary calcareous nannofossils from the sedimented Middle Valley of the  
Juan de Fuca Ridge, Leg 139 . . . . . 59  
S. Mao and S.W. Wise, Jr.

### SECTION 3: IGNEOUS PETROLOGY

6. Petrology of igneous rocks at Middle Valley, Juan de Fuca Ridge . . . . . 79  
D.S. Stakes and J.M. Franklin

### SECTION 4: SEDIMENTOLOGY AND SEDIMENT GEOCHEMISTRY

7. Sedimentary and diagenetic structures and textures in turbiditic and hemiturbiditic strata as  
revealed by whole-core X-radiography, Middle Valley, northern Juan de Fuca Ridge . . . . . 105  
C.A. Rigsby, R.A. Zierenberg, and P.A. Baker
8. Mineralogy of hydrothermally altered sediments and igneous rocks at Sites 856-858,  
Middle Valley, Juan de Fuca Ridge, Leg 139 . . . . . 113  
V. Kurnosov, I. Murdmaa, T. Rosanova, G. Kashintzev, V. Eroshchev-Shak, and S. Krasnov
9. Mineralogic and petrographic records of sediment-fluid interaction in the sedimentary sequence at  
Middle Valley, Juan de Fuca Ridge, Leg 139 . . . . . 133  
M.D. Buatier, A.-M. Karpoff, M. Boni, G.L. Früh-Green, and J.A. McKenzie
10. Mineralogy and mineral chemistry of hydrothermally altered sediment, Middle Valley,  
Juan de Fuca Ridge . . . . . 155  
M.I. Leybourne and W.D. Goodfellow
11. Geochemistry of hydrothermally altered sediment, Middle Valley, northern Juan de Fuca Ridge 207  
W.D. Goodfellow and J.M. Peter
12. Stable isotope and geochemical record of convective hydrothermal circulation in the sedimentary  
sequence of Middle Valley, Juan de Fuca Ridge, Leg 139 . . . . . 291  
G.L. Früh-Green, J.A. McKenzie, M. Boni, A.M. Karpoff, and M. Buatier

13. A note on the carbon, sulfur, and nitrogen contents of hydrothermally altered sediments, Middle Valley, Juan de Fuca Ridge . . . . .	307
P.A. Baker and S.L. Cross	
14. Geochemistry of carbonate nodules and cements and implications for hydrothermal circulation, Middle Valley, Juan de Fuca Ridge . . . . .	313
P.A. Baker, S.L. Cross, and S.J. Burns	
15. Organic matter and carbon isotope composition of carbonate nodules and associated sediments from Middle Valley, Leg 139 . . . . .	329
M. Boni, B.R.T. Simoneit, G.L. Früh-Green, R.N. Leif, and J.A. McKenzie	
16. Diagenesis of amorphous silica in Middle Valley, Juan de Fuca Ridge . . . . .	341
C.G. Wheat and J.S. Tribble	

**SECTION 5: SULFIDE PETROLOGY AND GEOCHEMISTRY**

17. Chemical composition and formation of a massive sulfide deposit, Middle Valley, northern Juan de Fuca Ridge (Site 856) . . . . .	353
S. Krasnov, T. Stepanova, and M. Stepanov	
18. Mineralogy and sulfur isotopic composition of the Middle Valley massive sulfide deposit, northern Juan de Fuca Ridge . . . . .	373
R.C. Duckworth, A.E. Fallick, and D. Rickard	
19. Helium and sulfur isotopes of sulfide minerals from Middle Valley, northern Juan de Fuca Ridge . . . . .	387
F.M. Stuart, R. Duckworth, G. Turner, and P.F. Schofield	

**SECTION 6: FLUID INORGANIC GEOCHEMISTRY**

20. Geochemistry of hydrothermal vent fluids from Middle Valley, Juan de Fuca Ridge . . . . .	395
D.A. Butterfield, R.E. McDuff, J. Franklin, and C.G. Wheat	
21. Fluid inclusion petrography and microthermometry of the Middle Valley hydrothermal system, northern Juan de Fuca Ridge . . . . .	411
J.M. Peter, W.D. Goodfellow, and M.I. Leybourne	
22. A technique for obtaining pore-water chemical composition from indurated and hydrothermally altered sediment and basalt: the ground rock interstitial normative determination (grind). . . . .	429
C.G. Wheat, J. Boulègue, and M.J. Mottl	

**SECTION 7: ORGANIC GEOCHEMISTRY**

23. Dissolved organic carbon in interstitial waters from sediments of Middle Valley, Leg 139 . . . . .	441
B. Ran and B.R.T. Simoneit	
24. Lipid/bitumen maturation by hydrothermal activity in sediments of Middle Valley, Leg 139 . . . . .	447
B.R.T. Simoneit	
25. Thermogenic and bacterial hydrocarbon gases (free and sorbed) in Middle Valley, Juan de Fuca Ridge, Leg 139 . . . . .	467
M.J. Whiticar, E. Faber, J.K. Whelan, and B.R.T. Simoneit	
26. Alkenones in sediments of Middle Valley, Leg 139: application as thermal sensors . . . . .	479
B.R.T. Simoneit, F.G. Prah, R.N. Leif, and S.-Z. Mao	

27. Time-temperature histories of kerogen and mineral ammonia from Leg 139 (Middle Valley) sediments . . . . .	485
J.K. Whelan, J. Seewald, L. Eglinton, and F.P. Miknis	
28. Thermal evolution of sediments from Leg 139, Middle Valley, Juan de Fuca Ridge: an organic petrological study. . . . .	495
S. Mao, L.B. Eglinton, J. Whelan, and L. Liu	
29. Bacterial profiles in hydrothermally active deep sediment layers from Middle Valley (NE Pacific), Sites 857 and 858 . . . . .	509
B.A. Cragg and R.J. Parkes	

**SECTION 8: ROCK MAGNETIC PROPERTIES**

30. Rock magnetic properties of mafic rocks from the Middle Valley sedimented rift . . . . .	519
K. Fukuma, U. Körner, and H. Oda	
31. Rock magnetic properties of hydrothermally formed iron sulfides from Middle Valley, Juan de Fuca Ridge . . . . .	535
U. Körner	

**SECTION 9: THERMAL STUDIES**

32. Estimating in-situ thermal conductivity from log data . . . . .	545
H.W. Villinger, M.G. Langseth, H.M. Gröschel-Becker, and A.T. Fisher	
33. Estimation of grain thermal conductivity in the turbidite sediment of the Juan de Fuca Ridge . . . . .	553
M. Kinoshita	
34. Anisotropic thermal conductivity of Pleistocene turbidite sediments of the northern Juan de Fuca Ridge . . . . .	559
E.E. Davis and D.A. Seemann	
35. Present and past temperatures of sediments at Site 857, Middle Valley, northern Juan de Fuca Ridge . . . . .	565
E.E. Davis and K. Wang	

**SECTION 10: PHYSICAL AND HYDROGEOLOGICAL STUDIES**

36. Structure of igneous basement at Sites 857 and 858 based on Leg 139 downhole logging . . . . .	573
M.G. Langseth and K. Becker	
37. Correlation of well logs, physical properties, and surface seismic reflection data, Middle Valley, Juan de Fuca Ridge . . . . .	585
K.M.M. Rohr and H. Gröschel-Becker	
38. Seismic velocities of diabase and basalt from Middle Valley sills and flows, northern Juan de Fuca Ridge . . . . .	597
H.M. Gröschel-Becker, H.W. Villinger, B.A. Konyukhov, G.J. Iturrino, and N.I. Christensen	
39. Permeabilities in the Middle Valley hydrothermal system measured with packer and flowmeter experiments . . . . .	613
K. Becker, R.H. Morin, and E.E. Davis	
40. Geotechnical and hydrogeological properties of sediments from Middle Valley, northern Juan de Fuca Ridge . . . . .	627
A.T. Fisher, K. Fischer, D. Lavoie, M. Langseth, and J. Xu	

41. Formation temperatures and pressures in a sedimented rift hydrothermal system: 10 months of CORK observations, Holes 857D and 858G . . . . .	649
E.E. Davis and K. Becker	
42. Hydrologic and thermal conditions at a sediment/basalt interface: implications for interpretation of field measurements at Middle Valley . . . . .	667
J.U. Bessler, L. Smith, and E.E. Davis	

**SECTION 11: SYNTHESSES**

43. Timing of ore deposition and sill intrusion at Site 856: evidence from stratigraphy, alteration, and sediment pore-water composition . . . . .	679
M.J. Mottl, C.G. Wheat, and J. Boulègue	
44. On the nature and consequences of hydrothermal circulation in the Middle Valley sedimented rift: inferences from geophysical and geochemical observations, Leg 139 . . . . .	695
E.E. Davis and A.T. Fisher	

**SECTION 12: DATA REPORTS**

45. <i>Data Report:</i> Physical properties of massive sulfide from Site 856, Middle Valley, northern Juan de Fuca Ridge . . . . .	721
H.M. Gröschel-Becker, E.E. Davis, and J.M. Franklin	
46. <i>Data Report:</i> Rock magnetic properties of hydrothermally altered sediments from Middle Valley . . . . .	725
H. Oda and U. Körner	
47. <i>Data Report:</i> Preliminary gamma-ray analyses of samples from Leg 139 . . . . .	737
W.S. Moore and D. Stakes	
48. <i>Data Report:</i> Sulfur content of sediment and sulfur isotope values of sulfide and sulfate minerals from Middle Valley . . . . .	739
R.A. Zierenberg	
49. <i>Data Report:</i> Trace metal composition of pore water from Sites 855 through 858, Middle Valley, Juan de Fuca Ridge . . . . .	749
C.G. Wheat and M.J. Mottl	

**SECTION 13: INDEX**

Index . . . . .	759
