Meter	Graphic Lith.	Section	Age	Structure	Disturb	Sample	Color	Description
1		1				S		DIATOM NANNOFOSSIL SILTY CLAY and DIATOM NANNOFOSSIL CLAYEY SILT
2		2		X		S		Major Lithologies: Olive gray (5Y 4/2) DIATOM NANNOFOSSIL SILTY CLAY and DIATOM NANNOFOSSIL CLAYEY SILT. This sediment contains variably preserved laminations, most commonly with traces of laminations but with some intervals containing well-preserved laminations. Distinct, (<1mm) burrows are sometimes seen disrupting laminations, e.g. in Section 2, 130–134 cm.
3		3		M				Minor Lithologies: Gray (5Y 5/1) SILTY CLAY and NANNOFOSSIL SILTY CLAY occurs as thin to medium interbeds in Section 1, 4–11 cm, 22–25 cm, 44–46 cm, 114–115 cm, 124–135 cm, 146–148 cm; Section 2, 62–65 cm, 111–112 cm, 126–128 cm, 133–134 cm, 137–140 cm; Section 3, 5–6 cm, 41–42 cm, 45–49 cm, 56–58 cm, 120–128 cm; Section 4, 0–2 cm, 15–16 cm, 33–34 cm, 114–116 cm, 126–128 cm, 141–144 cm; Section 5, 44–47 cm, 63–65 cm, 68–69 cm, 70–71 cm, 73–74 cm; Section 6, 96–97 cm, 143–147 cm; Section 7, 9–15 cm, 51–55 cm.
4	Holocene	4	5Y 4/2	X		S		Olive Gray (5Y 4/2) DIATOM NANNOFOSSIL SILTY CLAY with diatoms as a massive bed in Section 5, 77–103 cm. Thin SAND layers are occasionally present, e.g. at Section 5, 97–98 cm. A small patch of laminated olive gray material occurs in a gray bed at Section 5, 130–132 cm. Foraminifer and pollen samples from the Core Catcher suggest a Holocene age.

1		1		████				SILTY CLAY
2		2		████			Major Lithology: Olive gray (5Y 4/2) well-laminated SILTY CLAY composed of 0.5 mm-scale individual laminae of very dark gray (5Y 3/1), light olive gray (5Y 5/2), and gray (5Y 5/1). Gray laminae are typically 3–8 mm thick and irregularly interspersed, and olive gray (5Y 4/2) massive SILTY CLAY, locally finely mottled, with rare distinct bioturbation. Well-laminated intervals occur at Section 1, 59–104 cm; Section 2, 8–18 cm, 27–65 cm; Section 3, 136–147 cm; Section 4, 46–106 cm, 122–141 cm; Section 5, 0–6 cm, 28–128 cm, 148–150 cm; Section 6, 0–7 cm, 21–24 cm, 37–41 cm, 68–77 cm, 109–112 cm; CC, 0–2 cm. Indistinct laminations occur at Section 4, 8–46 cm.
3		3		████	S	5Y 4/2	Minor Lithologies: Sand layers occur at Section 2, 6–7 cm, 27–27.5 cm; Section 4, 7–7.5 cm, 21–22.5 cm, 150–151 cm.
4		4		████			Shell-bearing beds occur at Section 2: 98 cm, 102 cm, 106 cm, 122 cm, and 132 cm; Section 3: 15 cm, 22 cm, 33–37 cm, and 104 cm.
5		5		████			Gray beds occur at Section 5, 75–76 cm, Section 6, 77–80 cm.
6		6		████	S		Charcoal piece occurs at Section 4, 109 cm. Black thin laminations occur at Section 7, 55 cm.

1		1	Holocene			S	5Y 4/2	DIATOM NANNOFOSSIL SILTY CLAY Major Lithology: Olive gray (5Y 4/2) DIATOM NANNOFOSSIL SILTY CLAY. This lithology is mainly well laminated with minor structureless intervals in Section 1, 40.5–53.5 cm, 75–92 cm; Section 2, 35–43 cm, and CC, 14–20 cm. Minor Lithology: Gray (5Y 5/1) massive beds of SILTY CLAY AND CLAYEY SILT found in Section 1.64–65 cm, 123.5–123.8 cm, 124.5–129 cm, and Section 2, 10–19 cm. General Description: Comment: During description, color of freshly split core changes from black (N1) to olive gray due to oxidation. Some massive olive beds preserve a crudely laminated amalgamation of normally graded and massive sublayers. Gray bed in Section 2, 10–19 cm, contains 4 discrete depositional units; gray bed in Section 1, 124.5–129 cm, appears to consist 3 discrete, normally graded depositional units.
