EXPLANATION: The foldout compares the graphic sedimentologic columns for several channel-levee systems, all of different age, that form the Upper Lateo Complex. Two sections, one across the upper fan and one across the middle fan, are shown on the inset map. The names and relative ages of the various levees are indicated on the columnar stratigraphic cross-section of the middle fan. The upper fan sites are projected into this section. Depths of the seafloor at each site are given. Depths presented in the "Lithostratigraphy" section for each site in this volume. Note that the top of the section for Site 937 has been omitted due to space constraints.
