

ACKNOWLEDGMENTS

The Ocean Drilling Program Leg 167 scientific party expresses its thanks and appreciation to all those who gave the invaluable help that made drilling on the California Margin an outstanding success.

Excellent site-survey data were critical for a successful drilling operation in this region. These data were provided by Mitch Lyle, Lee Liberty, Phil Gallaway, Alan Mix, Lowell Stott, Jim Gardner, and Walt Dean, based on the results of *Wecoma* cruise W9406, led by Anne Trehu, and *Maurice Ewing* cruise EW9504. The high-resolution 4-channel seismics, 3.5-kHz sub-bottom profiling, and piston cores acquired on these cruises were of high enough quality to permit sites to be precisely targeted, thus minimizing the time spent on pre-site surveys. The site-survey cruises were supported by the Ocean Drilling Program, the National Science Foundation, and funds from the Joint Oceanographic Institutions. We gratefully acknowledge their support.

The operations of Leg 167 were carefully planned with the guidance of Scott McGrath (ODP Operations Manager). His expert knowledge and advice contributed tremendously to successful coring operations, which yielded 7.5 km of sediment. This high recovery could not possibly have been achieved without the dedication of the crew of the *JOIDES Resolution* under the supervision of Captain Ed Oonk and Drilling Superintendent Wayne Malone. We particularly thank the rig crew for a level of success that far exceeded our hopes.

The record-breaking core recovery of our leg placed the drill crew and, particularly, the ODP technical support staff under immense pressure. We are extremely grateful for their professionalism, including maintaining a pleasant working atmosphere and withstanding the tough physical workload. Their attitude made it possible for us to achieve our shipboard goals of carefully documenting and making initial measurements on all the sediments that we recovered.

We thank the JOIDES planning structure, especially the Ocean History Panel, the Sedimentary and Geochemical Processes Panel, and the Planning Committee for their support of Leg 167.

Finally, the Leg 167 scientific party expresses its gratitude to all governmental and academic institutions that provided the financial and logistical support to plan and conduct this expedition and to make our participation on this cruise possible.
