

ACKNOWLEDGMENTS

The members of the Shipboard Scientific Party of Leg 169S would like to express their appreciation to the JOIDES Sedimentary and Geochemical Processes Panel and Ocean History Panel for their encouragement and support of this unique drilling leg. We would also like to thank the Captain Edwin G. Oonk and the officers and crew of the *JOIDES Resolution* for their cooperation in accommodating the unusual operations required to undertake drilling in Saanich Inlet.

We thank the Scientific Party and Ocean Drilling Program shipboard technicians of Leg 169 who undertook various analyses during their drilling leg on behalf of the Leg 169S scientists. We are grateful to the Canadian Coast Guard and particularly the officers and crew of the *Tsekoa II* for their assistance during drilling operations, and we thank the Institute of Ocean Sciences and Robert Taylor for providing a launch for the transport of samples and personnel to and from shore.

The warm welcome to Saanich Inlet by Chiefs Jacks and Smith of the Tseycum and Tsartlip villages at the beginning of the leg was most appreciated. Site surveys were undertaken during cruises of the Geological Survey of Canada on the *John P. Tully* under Chief Scientist David Mosher. The very successful port call in Victoria, British Columbia, was the result of the tireless efforts of Kathy Gillis, Sue Dunlop, and Moira McCarthy of the Centre for Earth and Ocean Research at the University of Victoria. We thank them for their work on behalf of the Victoria Port Call Committee.
