SECTION DESCRIPTION

0-14 cm: Rubble caused by drilling consisting of sulfides and rock fragments. Size of fragments between 0.2-0.7 cm, partly rounded.

14-20 cm: FINE SANDSTONE, heavily disturbed by drilling. Color 5G 6/1 - Greenish gray.

Alteration: Pervasive epidotization and chloritization (?).
Weak dissemination of pyrrhotite (2-3%).
A few veinlets of pyrrhotite, less than 1 mm thick.
