150						

Pieces 1-7 (0-32cm)

Vuggy bronzy-yellow massive medium-grained pyrite with up to 20% porosity. Vugs are lined with idiomorphic pyrite and partly filled with white-pale gray crystalline anhydrite. Devoid of sphalerite and chalcopyrite.

Pieces 8-15 (32-82cm)

Vuggy bronzy-yellow medium grained massive pyrite with most of the vugs filled with clear to white anhydrite. The tubular morphology in some pieces (e.g. piece 15) may be due to replacement of tube worms. Devoid of sphalerite and chalcopyrite.
