SECTION DESCRIPTION

All pieces:
Major lithology: Siltstone with minor interbeds of fine sandstone, generally parallel-laminated, occasionally cross-laminated. Color varies from dark gray (N4) to various greenish gray (5B4 1/1, 5B4 5/1, 5B4 1/1).
Silicified in lower part of section (piece 11-16) and in piece 10 and 12 (less than in lower part). Few thin veins of pyrite, occasionally bedding-parallel, otherwise ^{pyrite ls} ~~pyrite ls~~ ^{mineral} impregnated throughout. Flecks of pyrohoite in piece 15. Total sulfide ~ 5%.
