SECTION DESCRIPTION

Summary: Siltstone with minor beds of very fine sandstone. A very few veins of pyrrhotite with some chalcopyrite and sphalerite, otherwise weak impregnations of pyrrhotite throughout. Zoophycus and chondrites at 36-44 cm. Color is gray (N5/).
Sulfides ~5% throughout. Very strong impregnation, 20-30% at 15-20 cm, forming mm-thick veinlets in a subhorizontal network texture.
