SEDIMENTS / SEDIMENTARY ROCKS

SECTION DESCRIPTION

Summary: (all pieces)

Massive sulfide, comprising pyrrhotite and black (Fe-rich) sphalerite with very minor pyrite and chalcopyrite. Blades of pyrrhotite <sup>(hexagonal)</sup> form a relatively open network with interstitial sphalerite and rings with euhedral quartz-crystals, some anhydrite. Sphalerite content is up to 60% in some of the pieces.
