SECTION DESCRIPTION

Major Lithology: SILTY CLAY

0-150 cm: Weakly indurated greenish gray (5GY 5/1)

SILTY CLAY. Very homogeneous, non-layered, no apparent bedding. From 100-120 cm the color is slightly lighter, probably due to dolomite presence

Dolomite nodules at 35 and 45 cm (3-4 mm diameter)

Pyrite nodule at 104 cm (3-4 mm diameter)
