SECTION DESCRIPTION

Dark gray (5Y 4/1)  
FINE to MEDIUM SAND.

This section contains the same range of grain sizes as sections 1 & 2 (and the previous 2 cores), but it has \*more fine SAND than MEDIUM sand\*. It is still poorly sorted and massive, and still dark gray (5Y 4/1). This grain size variation -- although subtle -- may be real, but the core is badly disturbed (sloppy) by drilling.

100% SILT + SAND
