Piece ①: (AND ONLY)
 zoned (see sketch):
 v.f.g. pyrrhotite "core"
 5% porosity, to a central
 f.g. pyrite (95%) with minor
 (5%) f.g. black sphalerite,
 to an outer rim zone of
 1-2mm hexagonal pyrrhotite plates in
 a mesh texture oriented perpendicular
 to growth(?) surface. There is a
 2mm wide layer of colloform, compact
 v.v. f.g. pyrite ~~in~~ as a rind on
 a large part of the sample (see
 sketch).
