SECTION DESCRIPTION

SILTY CLAY

flaky chunks of indurated sec (drilling dis)  
 → not as consolidated as previous sec  
 → larger chunks.

- grain size is consistent throughout
- v. poor silty clay

non-calcareous

↔ noticed change in color N5 to N6  
 at 93cm. (but no change in grain size)

Base contact ???

- slightly more soupy than rest of sec.

~~10% silt + sand~~
