VISUAL CORE DESCRIPTION

SEDIMENTS / SEDIMENTARY ROCKS

SECTION DESCRIPTION

very dark greenish gray (10Y 3/1)

calcareous  
Micaceous <sup>very</sup> Fine Sand  
filled with carbonate concretions; no obvious grading within the section (base of sand is in Section 2); non indurated between nodules

alternatively ~~optionally~~, this is a carbonate-cemented sandstone that has been bisected by XCB drilling (but this is less likely in the sandy part (see ~~BAK~~ 7 HPC core))

wood fragment
