

## ACKNOWLEDGMENTS

The Leg 173 Shipboard Scientific Party is indebted to many people, ashore and at sea, for their support and encouragement that made the leg possible in the first place and ensured its smooth operation at sea.

We are grateful for the support and encouragement of our co-proponents Dale Sawyer and Tim Reston, who put in so much effort to several iterations of the original Leg 173 proposal.

We also thank all the Ocean Drilling Program (ODP) panels that dealt with our proposal for their encouragement and their confidence in the scientific value of the proposal. We are grateful particularly to Alastair Robertson (when Chair of the Tectonics Panel) and the late Rob Kidd (when Chair of the Planning Committee) for their support at critical times.

Much of the site survey data used to choose the drill sites was collected and processed by others. We would like to thank Gilbert Boillot, Deping Chian, Simon Dean, Karl Hinz, Lotte Krawczyk, Peter Miles, and Tim Reston for generously sharing their data with us.

We owe a special thanks to Jeff Fox and to the staff of the United States Embassy in Lisbon without whose skills in diplomacy and negotiation the Iberia Abyssal Plain sites might never have been drilled.

At sea it was a pleasure to be able to avail ourselves of the professional services of Mike Storms, Operations Manager, and of Wayne Malone, Drilling Superintendent. Mike kept us cheerful and steered us through some difficult decisions. No problem, or even combination of problems, seemed able to defeat the skills of the drilling team.

We thank Captain Ed Oonk and the ship's crew and the Catermar team for ensuring we had a safe and comfortable stay on board.

Last, but by no means least, we thank the ODP technical team led by Dennis Graham. They kept the laboratory operations running smoothly and were so patient with the impatient scientists who wanted to get their hands on every piece of basement core as soon as possible. We thank Lorraine Southey, who successfully navigated the shoals and reefs of the global sampling party while we were in transit to Halifax and Michiko Hitchcox for her kindness and phenomenal efficiency in preparing all the site reports.
