

Chapter 1, Figure F5. Composite seismic section through Leg 196 drill sites. See map (upper right) for location and geometry of the composite construction. These data were obtained as part of a three-dimensional (3-D) seismic reflection volume acquired during a 1999 *Ewing* cruise. The top section is a two-dimensional prestack depth-migrated version of a section from the 3-D data volume. The bottom section shows the same data converted to time. This version of the data is from Hills et al. (2001). CMP = common midpoint, VE = vertical exaggeration.
