INDEX TO VOLUME 124E

This index provides coverage for the Initial Reports volume of the Proceedings of the Ocean Drilling Program for Leg 124E. No Scientific Results volume was published. The index is included with the Volume 124 index for the sake of convenience, and because the two Initial Reports volumes were packaged together within the same cover.

The index is presented in two parts: (1) a Subject Index and (2) a Site Index. Page numbers of index entries are shown with the suffix e, indicating that this was an engineering leg.

The index was prepared by Wm. J. Richardson Associates, Inc., under subcontract to the Ocean Drilling Program. It follows the concept developed by the Deep Sea Drilling Project at Scripps Institution of Oceanography for a comprehensive, cumulative index of DSDP volumes. Both of these indexes are based on a hierarchy of entries: (1) a main entry, defined as a key word or concept followed by a reference to the page on which that word or concept appears; and (2) a subentry, defined as a further elaboration on the main entry followed by a page reference.

The Subject Index follows a standard format. Geographic and individual names are referenced in the index only if they are subjects of discussion.

The Site Index is structured to contain entries for the sites discussed in the volume. Site entries are modified by subject subentries.

The indexes cover text figures and tables but not core description forms (“barrel sheets”) or core photographs. Also excluded are bibliographic references, names of individuals, and routine front and back matter.

For further information, and for information on electronic formats available, contact the Chief Production Editor, Ocean Drilling Program, 1000 Discovery Drive, College Station, Texas 77845-9547, U.S.A.
