

INDEX TO VOLUME 199

This index covers both the *Initial Reports* and *Scientific Results* portions of Volume 199 of the *Proceedings of the Ocean Drilling Program*. References to page numbers in the *Initial Reports* are preceded by "A" followed by the chapter number with a colon (A1:) and to those in the *Scientific Results* (this volume) by "B" followed by the chapter number with a colon (B1:).

The index was prepared by Earth Systems, under subcontract to the Ocean Drilling Program. The index contains two hierarchies of entries: (1) a main entry, defined as a keyword or concept followed by a reference to the page on which that word or concept appears, and (2) a subentry, defined as an elaboration on the main entry followed by a page reference.

The index covers volume text, figures, and tables but not core-description forms ("barrel sheets"), core photographs, smear slide data, or thin section descriptions. Also excluded from the index are bibliographic references, names of individuals, and routine front matter.

The Subject Index follows a standard format. Geographical, geologic, and other terms are referenced only if they are subjects of discussion. A site chapter in the *Initial Reports* is considered the principal reference for that site and is indicated on the first line of the site's listing in the index. Such a reference to Site 1215, for example, is given as "Site 1215, A8:1–60."

The Taxonomic Index is an index relating to significant findings and/or substantive discussions, not of species names *per se*. This index covers three varieties of information: (1) individual genera and species that have been erected or emended formally, (2) biostratigraphic zones, and (3) fossils depicted in illustrations. A taxonomic entry consisting of both genus and species is listed alphabetically by genus and also by species. Biostratigraphic zones are listed alphabetically by genus; zones with letter prefixes are listed under "zones."

SUBJECT INDEX

A

- absolute pole, rotations, B21:21
- Abyssamina quadrata*, preservation, A8:26
- acceleration, well-logging, A11:80
- actinomimids
 - percentage in Zone RP15, B24:19
 - Zone RP15, B24:7–8
- age
 - biogenic sediments, A4:10
 - radiolarian zonal boundaries, A14:31
 - radiolarian zones, A1:74
 - vs. paleodepth, A1:63; B1:36
 - vs. paleolatitude, A1:65
- age vs. depth
 - correlation of Sites 1218 and 1219, B2:27
 - Site 1215, A8:34
 - Site 1216, A9:25
 - Site 1217, A10:36, 38
 - Site 1218, A11:61
 - Site 1219, A12:66
 - Site 1220, A13:49, 51
 - Site 1221, A14:35
 - Site 1222, A15:27
- alkalinity
 - pore water, A8:15; A9:10; A10:16; A11:25; A12:25; A13:21; A14:18; A15:12

- vs. depth, A8:35; A9:26; A10:39; A11:64; A12:69; A13:53; A14:38; A15:30
- alkenones
 - organic biomarkers, B25:1–11
 - properties, B25:8
- aluminum
 - bulk sediments, A8:17; A9:11; A10:17; A11:26; A12:26–27; A13:22; A14:19; B14:15
 - ferromanganese micronodules, B14:4
 - hydrothermal sediments, B15:3
 - Paleocene/Eocene boundary, A1:84; A13:23; B16:3
 - precision by inductively coupled plasma–atomic emission spectroscopy, A7:11
 - sediments, B14:4
 - velocity and density, B13:6
 - vs. age, A1:69
 - vs. depth, A8:36; A9:27; A10:40; A11:65; A12:70; A13:54, 56; A14:39, 41; B15:5; B16:6
 - vs. manganese in bulk sediments, B14:16
 - See also* manganese/aluminum ratio
 - aluminum/(aluminum + iron + manganese) ratio, vs. iron/titanium ratio, B14:18
 - aluminum/titanium ratio
 - bulk sediments, A12:27
 - vs. age, A1:70
 - aluminum oxide, calibration by inductively coupled plasma–atomic emission spectroscopy, A7:10

ammonium
 pore water, A12:25; A13:21
 vs. depth, A8:35; A9:26; A10:39; A11:64; A12:69;
 A13:53; A14:38; A15:30
 anoxia
 burial at Paleocene/Eocene boundary, B23:4–5
See also redox
 Antarctic Bottom Water, benthic foraminifers, A12:19
 Antarctic ice volume, Oligocene, B1:11
 antimony, Paleocene/Eocene boundary, B16:3
 arsenic
 hydrothermal sediments, B15:3
 Paleocene/Eocene boundary, B16:3
 vs. depth, B15:3; B16:6
 artostrobids
 percentage in Zone RP15, B24:19
 Zone RP15, B24:7
 atmospheric circulation, climate models, A3:5–6
 authigenesis, pore water, A10:17

B

barite
 Paleocene/Eocene boundary, B1:19; B22:1–23
 vs. depth, B22:17–18, 23
 barite, calcium carbonate-free, vs. depth, B22:19
 barium
 bulk sediments, A8:17; A9:11; A10:18; A11:27;
 A12:27; A13:23; A14:19; B14:15
 Eocene sediments, B20:1–33
 hydrothermal sediments, B15:3, 11
 Paleocene/Eocene boundary, A1:85; A13:24; A14:20;
 B1:19; B16:3; B22:1–23
 pore water, A8:16; A9:10; A10:17; A12:26
 sediments, B14:4
 vs. depth, A8:35–36; A9:26–27; A10:39–40; A11:64–
 65; A12:69–70; A13:53–54, 56; A14:39, 41;
 A15:30; B15:5; B16:6; B21:17
 vs. manganese in bulk sediments, B14:16
 barium, shipboard, sediments, B22:22
 barium/phosphorus ratio, productivity, B22:9
 barium/reactive phosphorus ratio, vs. depth, B22:19
 barium/titanium ratio, vs. age, A1:70
 basalt, lithologic units, A8:6; A10:8; A11:10; A12:11;
 A13:9; A14:9; A15:6
 benthic extinction event. *See* Paleocene/Eocene bound-
 ary Benthic Extinction Event
